1. What is Chain of Identity & Custody?

What is Advanced Therapies?

Advanced Therapies creates personalized treatments like cell therapies. These therapies require a precise chain of identity and custody to ensure the correct cells are used throughout the process, maintaining safety and effectiveness. This process is essential to prevent errors and ensure patient trust.

What is the Chain of Identity & Custody portal?

The Chain of Identity & Custody (COI/C) portal tracks the chain of identity and chain of custody hand-offs throughout the order fulfillment process by managing and verifying proper handling of the drug product.

Images are from before the redesign.

What are the Chain of Identity and Custody Processes?

Chain of Identity (COI)

The tracking of whose cells are moving through the order journey by associating them to a unique patient identifier. This unique identifier is verified before and after each action.

Chain of Custody (COC)

The tracking of who handled the material/product, what actions were performed, when and where the actions occurred throughout the entire order journey.

Original User Journey

- 1 Press the COI ID to open Intermediary Page.
- 2 Press button to open workflow.

2. Project Overview

How It Started

Upon receiving consistent feedback on the portal's navigation for several months, 11 user interviews were conducted. These user interviews confirmed that not only were there navigation issues that were substantially impacting their day-to-day revealed many undocumented opportunities.

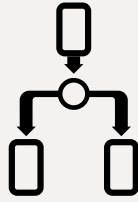

This grew into an initiative, later named “Project Reset”, with its primary objective to simplify the user experience of COI/C and provide easy navigation between workflows.

Key Discoveries

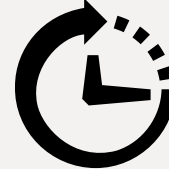

1. Navigation

Improve navigation throughout platform and between different stages of an order. Decrease time to navigate to other workflows.

2. Information Architecture

Improve how information is organized, structured, and presented to increase ease-of-use. Show relevant information to more quickly identify orders and pages.

3. Status Visibility

Increase visibility of order and stage statuses to simplify error identification and decrease time for error prevention.

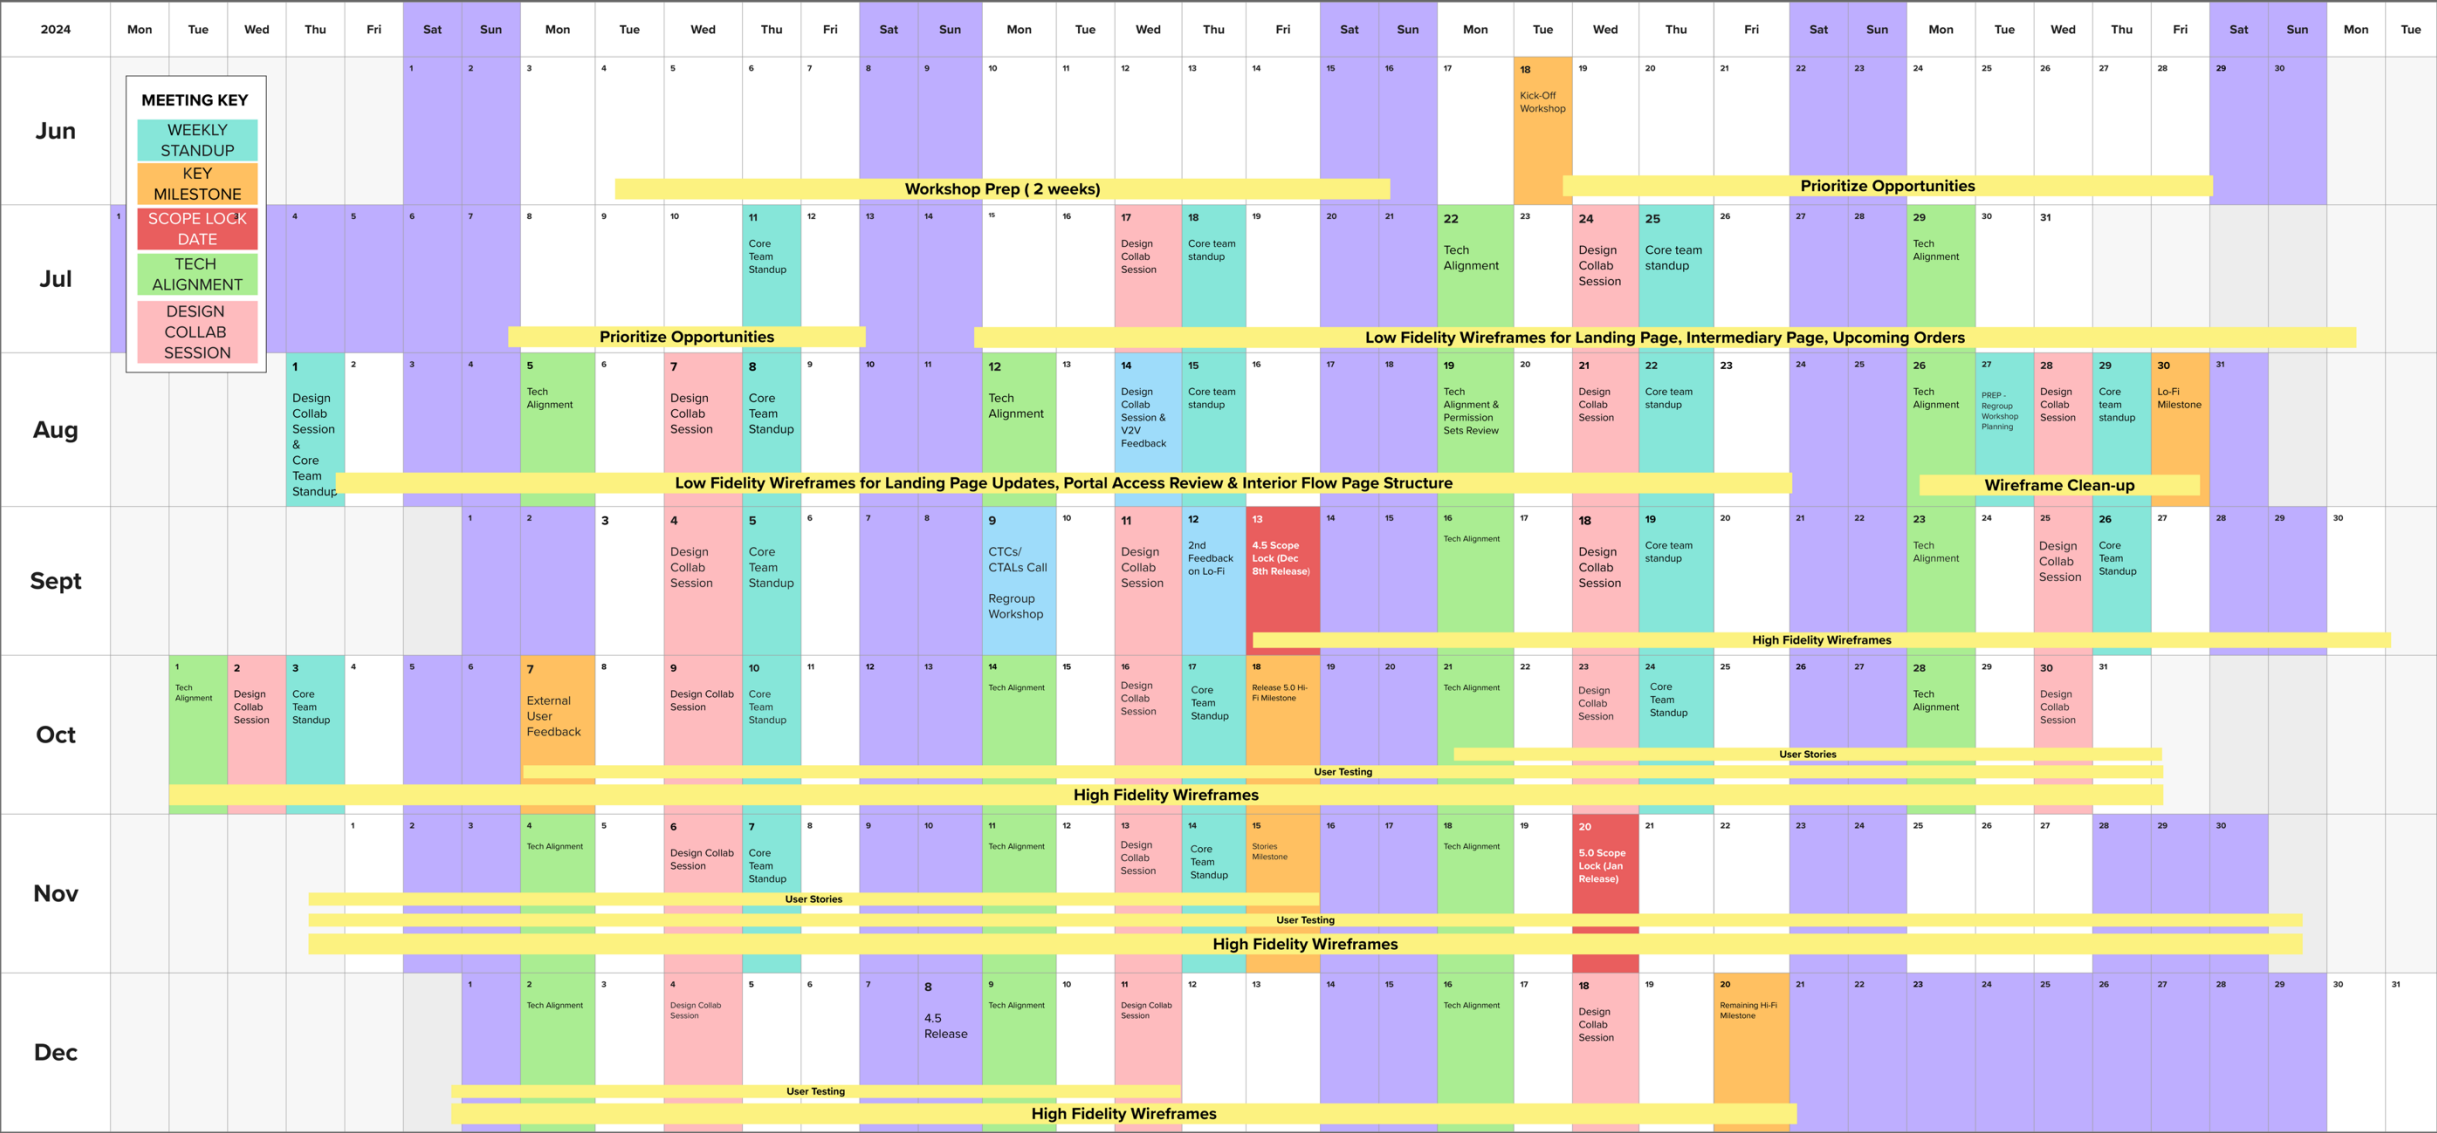

4. Scalability

Improve new and existing user experience through providing access to additional support and resources throughout their day-to-day tasks.

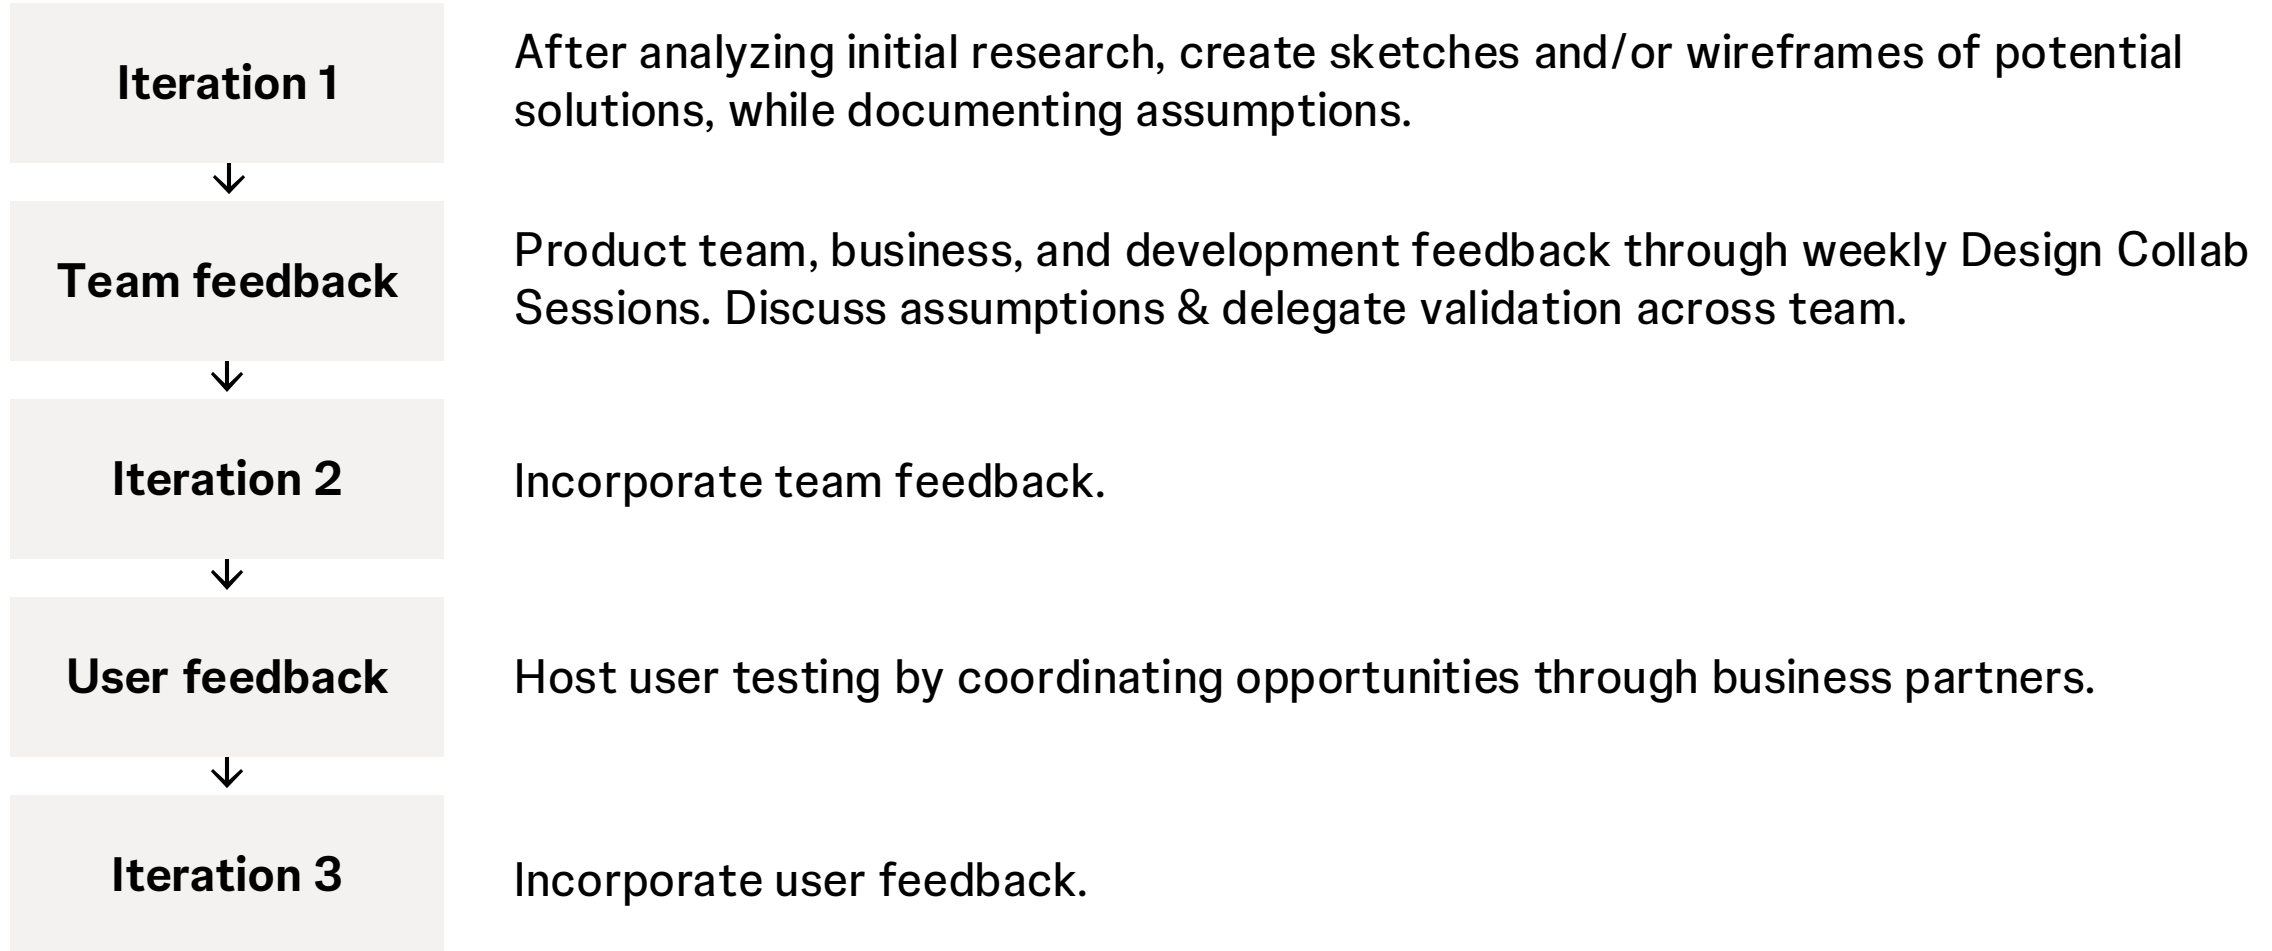

Milestones

Milestone	DRI	Timeline	Activity
Kick-Off Workshop	Megan & Amanda	June 18	Kick-off to initiative
Low-Fi Prototyping Deadline	Megan	July 8 – Aug 30	Complete low-fi wireframes and wire-flows
User Feedback Session	Megan & Katelyn	August 14	Group user interview of low-fi landing page
Product Team Low-Fi Workshop	Megan	Sept 9	Workshop and demo all low-fi wireframes
User Feedback Session	Megan & Katelyn	Sept 12	Demo all interior pages
Hi-Fi Prototyping	Megan	Sept 13 – Oct 18	Complete hi-fi wireframes for 5.0 release
User Testing	Megan	Oct 7 – Dec 11	Group user interview of all wireframes
Tech Refinement & Stories	Product Team	Oct 21 – Nov 15	Complete stories for 1 st release
Scope Lock for 1 st Release	Product Team	Nov 20	All features for 1 st release validated and completed
Incorporate Feedback	Megan	Sept 13 – Dec 20	Dec 20, 2024: Remaining Hi-Fi wireframes complete

Timeline

Design Milestones

3. Initial Research

Purpose

Several requirements had been previously communicated by users through the intake, revealing navigational pain-points. Although the primary purpose of this research was about navigation, the findings revealed additional opportunities.

Approach

Leveraged on-site visit feedback and observations in addition to user interviews with a focus on navigation.

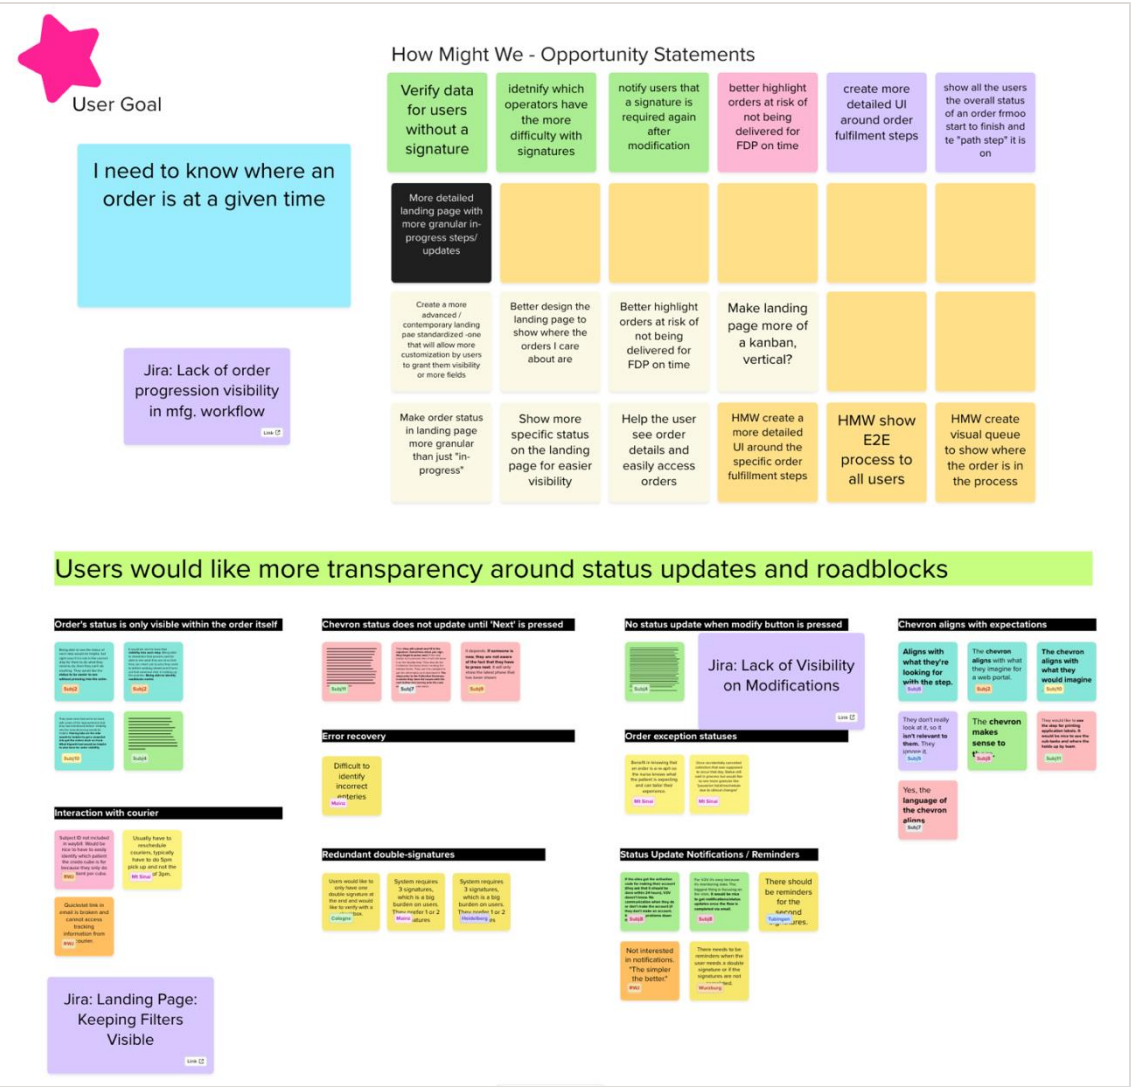

On-Site Visits

- Germany
 - 4 Hospitals
 - 1 Cell Lab
 - 1 Cryopreservation Center
- North America
 - 3 Hospitals
 - 1 Cryopreservation/Manufacturing Center

Interviews

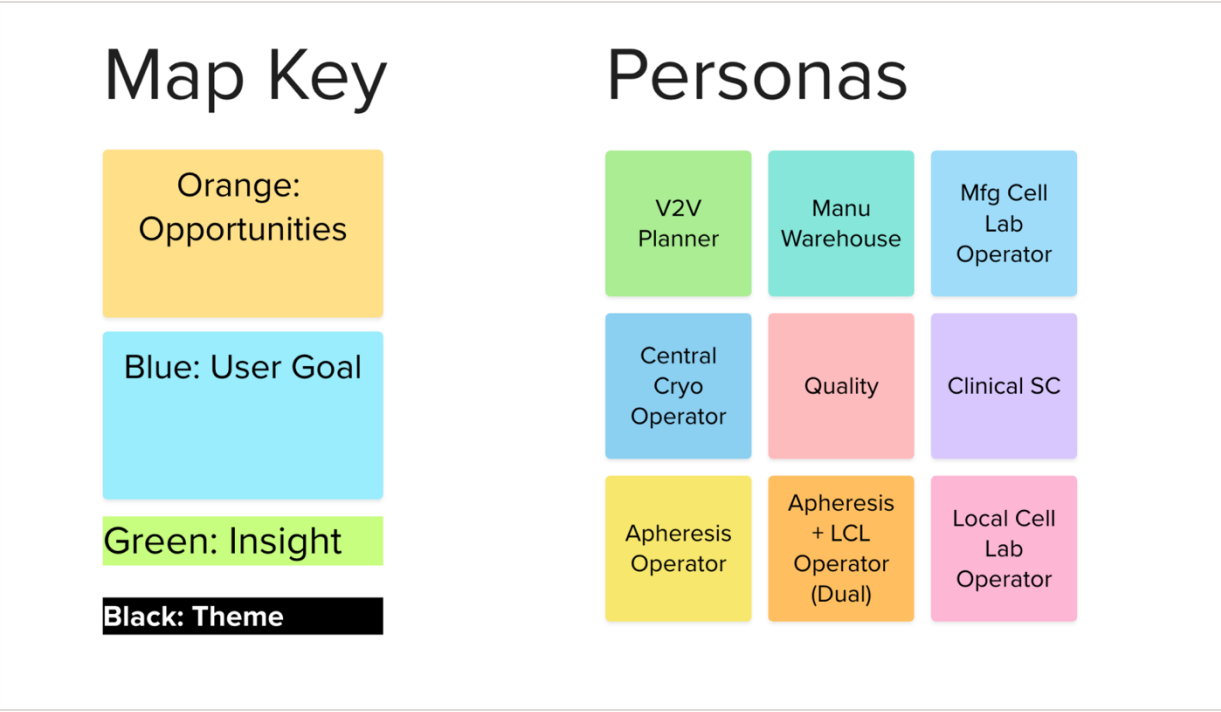

- 11 users interviewed, who had previously provided navigation-related feedback. This included the following personas:
 - Vein-to-vein planners (V2V)
 - Manufacturing warehouse personnel
 - Quality personnel (QA)
- 30-minutes per interview
- Informal, conversational interview structure

Consolidating Feedback

After conducting the interviews, feedback was grouped into themes. These themes rolled up into insights and user goals.

The user goals and insights were presented to the broader team before we conducted a workshop to ideate on opportunities through the “How Might We” problem statement structure.

Severity of Opportunities

Determined based on finding's severity, inspired by Nielson Norman's *Severity Ratings for Usability Problems*.

0

Not a usability problem

No fixes needed

1

Cosmetic problem only

Need not be fixed unless extra time is available on project

2

Minor usability problem

Fixing this should be given low priority

3

Major usability problem

Important to fix, so should be given high priority

4

Usability catastrophe

Imperative to fix this before product can be released

Opportunity Categories

1. Logging in & out
2. Status visibility
3. Navigation
4. Shipping bags
5. Labels
6. Verbiage
7. Tracking & searching orders
8. Modify button
9. General enhancements

1. Logging In & Out

Auto-save when session times out

2 - Minor usability problem

Would have to re-start section being worked on if session timed out before they saved.

Manufacturing Warehouse

Verification code takes too long

3 - Major usability problem

Wait time for verification code varies throughout the day but can take up to 20 minutes. If user has requested another code during this delay, they can only use the most recent verification code, causing a longer delay to start workflow.

V2V, Manufacturing Warehouse, QA

“Keep me signed in?” button purpose is unclear

2 - Minor usability problem

Doesn't keep the users logged in longer as they expected. They are unclear what value it adds.

Clinical, QA

2. Status Visibility

Easy identification of roadblocks

0 - Not a usability problem

Would like to see more specifics on where roadblocks so that they can identify who to reach out to.

V2V, Manufacturing Warehouse

Email and notification updates for V2V planners

0 - Not a usability problem

V2V planners wanted to have email updates when accounts are or aren't logged into for the first time and workflow updates.

V2V

J&J Innovative Medicine

Status in chevron does not update without pressing "Next" button

2 - Minor usability problem

The status only updates when the "Next" button is pressed, which causes confusion.

QA

Status in chevron does not update when being modified

2 - Minor usability problem

If the modify button is pressed, the chevron does not reflect that it is being edited and still shows the stage as complete. Causes delays.

V2V

Chevron should not have interactive states with no interactions

1 - Cosmetic problem only

Overall, users liked the chevron, but the hover and active state (underline on label) was confusing.

V2V, Manufacturing Warehouse, Clinical, QA

3. Navigation

“Back” & “Next” buttons cause friction

3 - Major usability problem

Users must press the “back” and “next” button frequently to review the information that they need. This adds a lot of time, especially with the addition of the Release Memo.

V2V, Manufacturing Warehouse, Clinical, QA

Easier access to specific workflows

2 - Minor usability problem

Would like to be able to press into the exact stage they need to go to, especially from the intermediary page.

Clinical

“Download summary” to proceed is unnecessary to move to next stage

2 - Minor usability problem

Right now, Manu. Warehouse must download the summary when they don’t need it to proceed.

Manufacturing Warehouse

Easy access back to the intermediary page

2 - Minor usability problem

To get back to the intermediary page, the user needs to either press the “Back” button a bunch or return to home to search the order again.

V2V

4. Shipping Bags

Must modify to switch bag

2 - Minor usability problem

To switch bags if something happens to the original, they must modify the order, deselect the original bag, reselect the new bag, and get new signatures. This delays the process by about 10 minutes.

QA

Automatically select first bag

0 - Not a usability problem

Usually selects the first bag unless something is wrong, would like for the program to automatically select the first bag as the default.

QA

Can't ship multiple bags in the portal, requires manual tracking

2 - Minor usability problem

With commercial patients, sometimes both bags need to be shipped, but portal only allows for one bag at a time meaning that the additional bag must be manually tracked.

Clinical

5. Labels

Consistency with middle names

1 - Cosmetic problem only

Portal does not consistently create labels with middle names, so it does not allow align with other platforms.

QA

Ad block affects label printing

2 - Minor usability problem

Some systems automatically block the pop-up for the label printing, which requires the user to modify the order to reload the label to print.

V2V

Lot number should be in the header of every summary

1 - Cosmetic problem only

Users would like for the lot number to be in the header of every summary so that the order is easier to identify.

Clinical

Ability to input time zone for cryopreservation

2 - Minor usability problem

User needs to easily be able to identify if the time between Apheresis and Cryopreservation is less than 32 hours, but this is more difficult when they must guess the time zones.

V2V, Clinical

6. Verbiage

**V2V Planners' heading of
“Logistics test run” is confusing**

1 - Cosmetic problem only

The language is confusing to V2V Planners, and they don't understand why it was named that.

V2V

**Wording of “Confirm that the
cassette hasn't been exposed for
3 minutes” is awkward**

1 - Cosmetic problem only

The question and its answers are worded awkwardly, which confuses the new users.

Manufacturing Warehouse

7. Tracking & Searching Orders

Can't view cancelled orders

3 - Major usability problem

They cannot access cancelled order summaries, even though they are still responsible for tracking them. IT must look up the order for them.

V2V, Clinical

Sometimes remanufactured batches cannot be tracked in the portal

2 - Minor usability problem

Some remanufactured batches cannot be tracked in the portal, so they must be tracked via paper, even if some of the information is already in COIC.

QA

Completed orders cannot be searched unless the automatic filter is changed

2 - Minor usability problem

If a user searches a completed order in the search bar, it will not appear until they change the automatic filter settings to include completed orders. They cannot toggle on the completed orders on before typing in the order otherwise the system will time out because it is too big of a search request.

V2V

8. Modify Button

Status in chevron does not update when being modified

2 - Minor usability problem

If the modify button is pressed, the chevron does not reflect that it is being edited and still shows the stage as complete. Causes delays.

V2V

No alerts or indications that status has changed when modifying a previously completed section

2 - Minor usability problem

There is no alert to the person who is modifying the section or the people who signed the section to indicate that the section is now being modified, which can cause delays, especially when the modify button was accidentally pressed.

V2V

9. General Enhancements

Information icon (how-to)

0 - Not a usability problem

There is a desire for a how-to button (like the “i” button) to help users like with a picture of the Credo cube and finding the COIC bag ID label.

V2V

Easy export to excel

0 - Not a usability problem

Because some users track information in excel, they would like the ability to automatically export the summaries to excel. This could save them 10-15 minutes.

QA

Reorder default view for orders

0 - Not a usability problem

They default orders that appear on the landing page are often not helpful because they are not new nor relevant.

V2V

4. Kick-Off Workshop

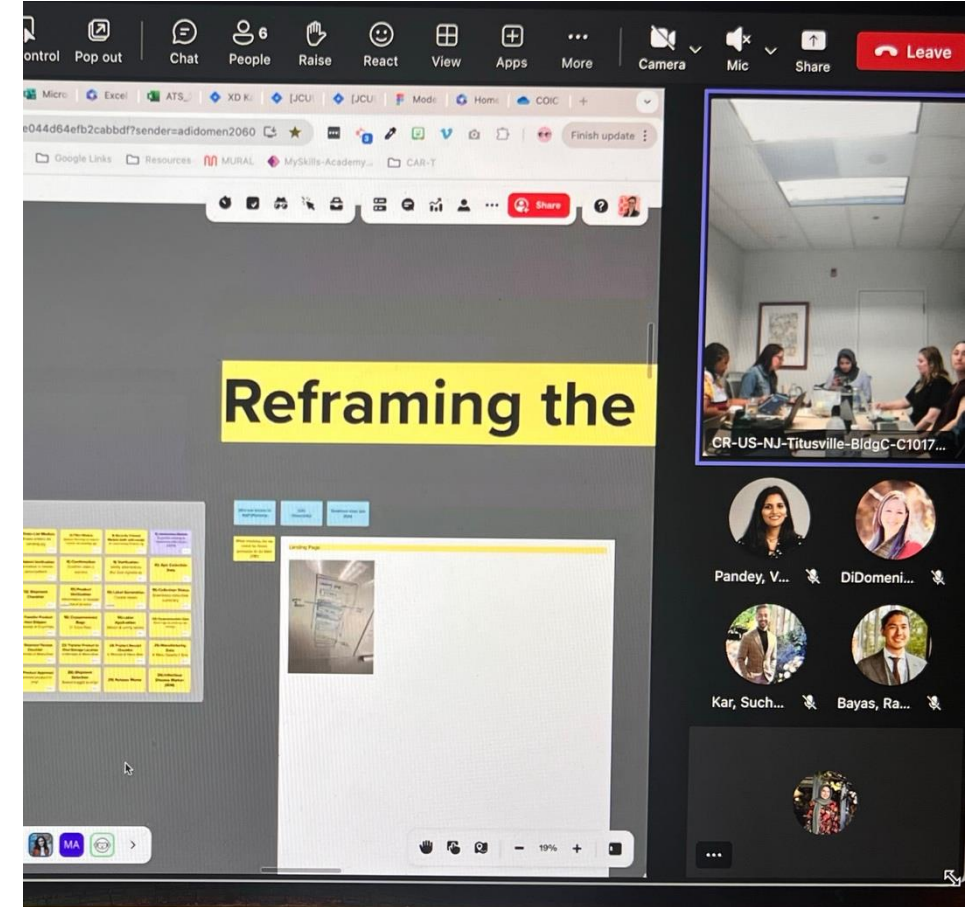

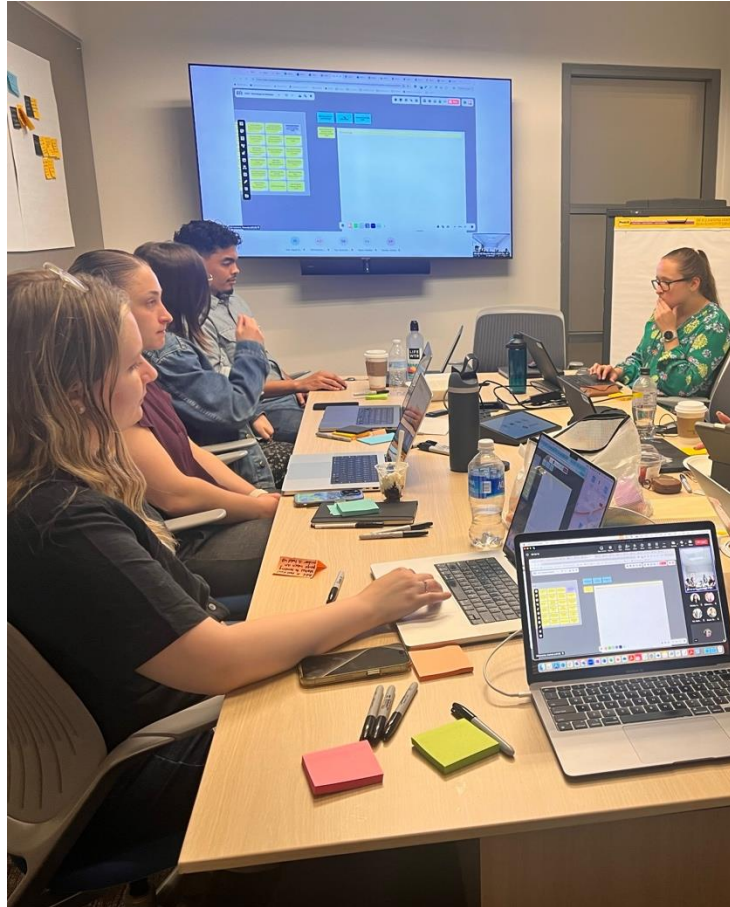

Approach

All day workshop with the design, product, and engineering team with **objective of producing potential solutions to identified opportunities**. Additionally, reviewed feedback from prior user testing before starting activities:

- Ideate on How Might We opportunity statements
- Review permission sets
- Create and iterate on low-fidelity wireframes

Modality

Hybrid ideation with online collaboration on the whiteboarding software Mural and in-person on sticky notes, shown through a camera connected to the call.

How Might We?

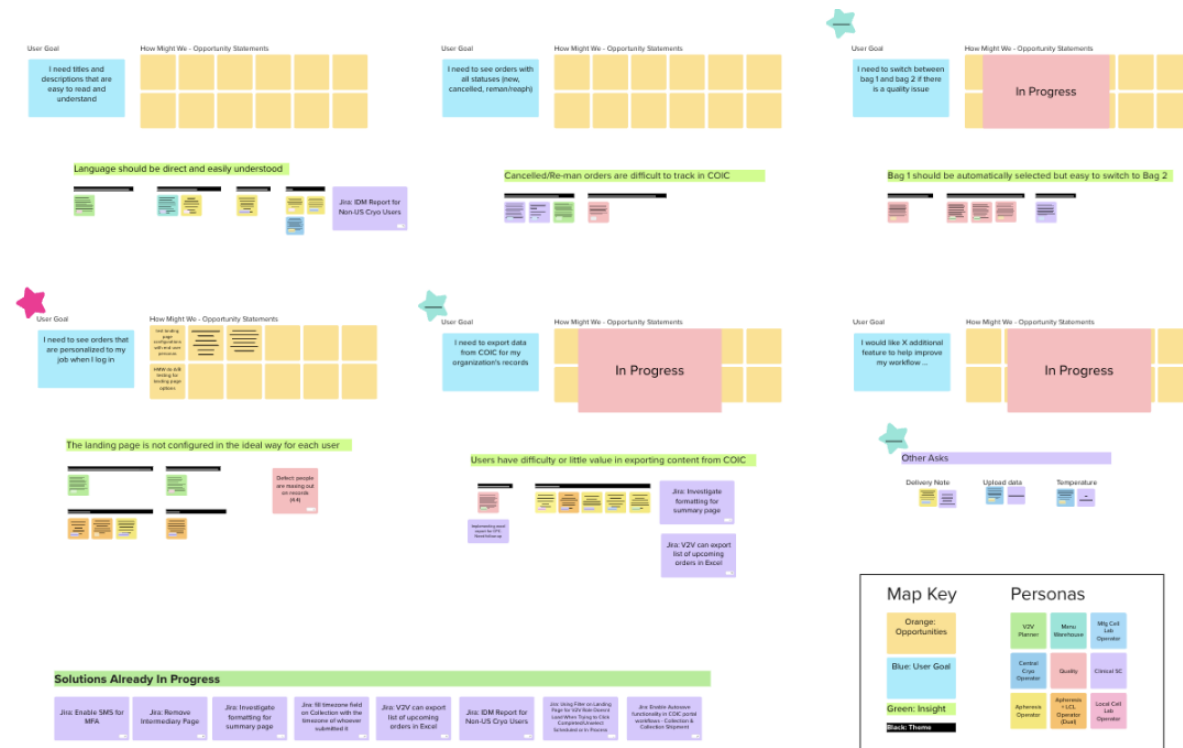

We wrote How Might We (HMW) statements for opportunities to address user feedback that was collected in through the interviews.

How might we _____ for _____ so that _____.

Intended Action Primary User Desired Effect

How Might We?

Online participants entered opportunities directly into Mural, while in-person participants wrote them on sticky notes. Notetakers added in-person notes to the Mural as throughout the session.

Permission Sets

Discussed if current user roles is future proof and scalable. Resulted in treating user roles in system as permission sets, not as personas.

Sketching

Sketched wireframes of landing and intermediary pages. Led to idea of combining the landing page's search with the order info on the intermediary page.

Outcome

Addressed key customer insights about transparency of order status and difficulty of navigating between orders and workflows.

- 1 Show more specific steps within status.
- 2 Remove additional step of intermediary page.

Next Steps

Continue ideation using the How Might We statements as a jumping off point.

5. Ideation

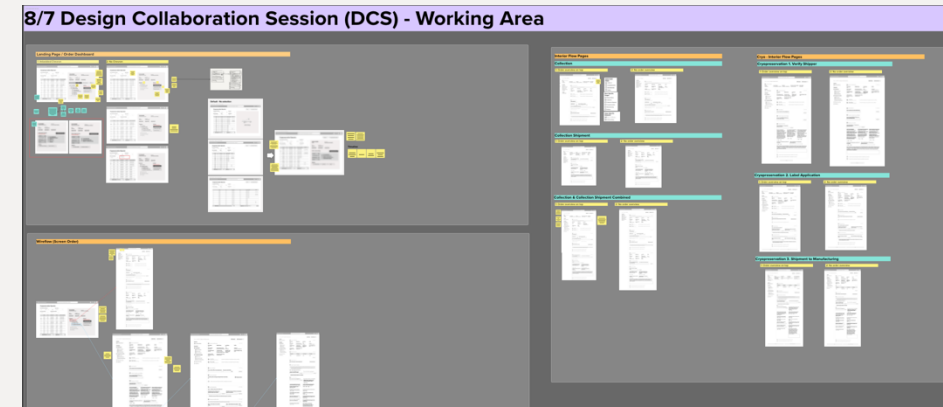

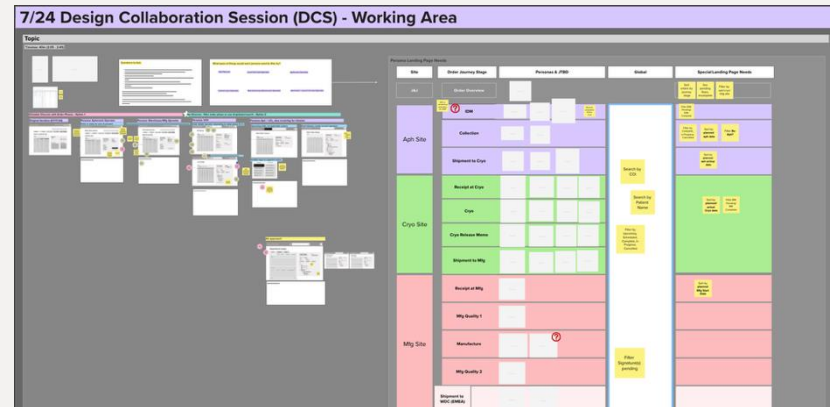

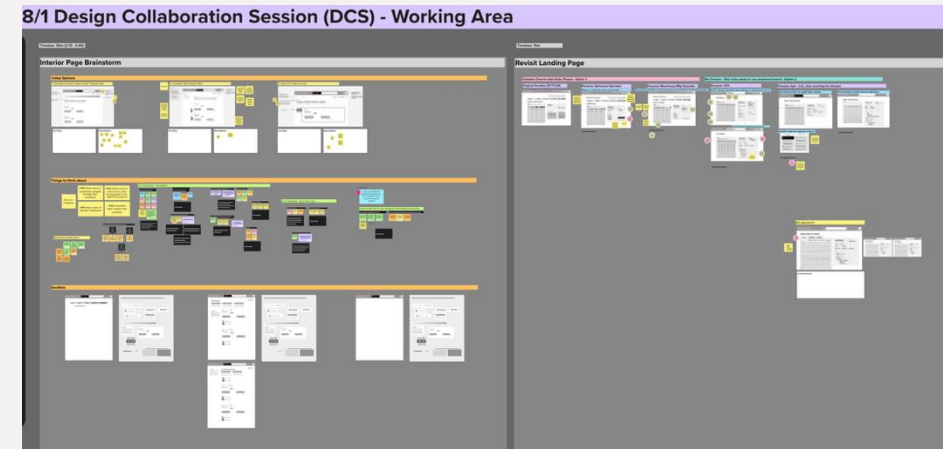

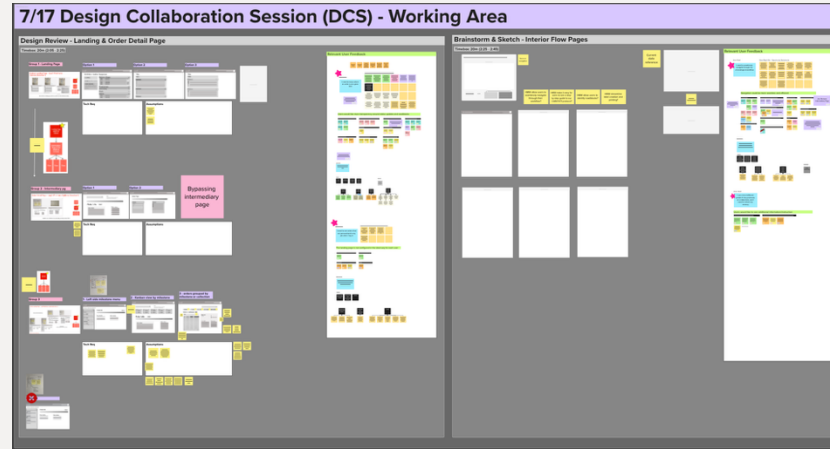

Approach

At first, we started by iterating on the sketches from the Kick-Off Workshop. Then, we adapted these concepts and brainstormed additional ones to better suit the users' needs and technical feasibility within the scope of our releases.

Gradually, we moved from sketches to digital low fidelity wireframes, to medium fidelity, before creating final touches with high-fidelity wireframes.

Collaboration

We hosted a weekly, one-hour Design Collaboration Session to iterate on solutions and receive feedback from key stakeholders, product team, and tech team. This fostered cross-team engagement and led to solutions that considered the holistic end-to-end experience.

How Might We

Expediate Workflow Selection?

Original User Journey

- 1 Press the COI ID to open Intermediary Page.
- 2 Press button to open workflow.

Intermediary Page

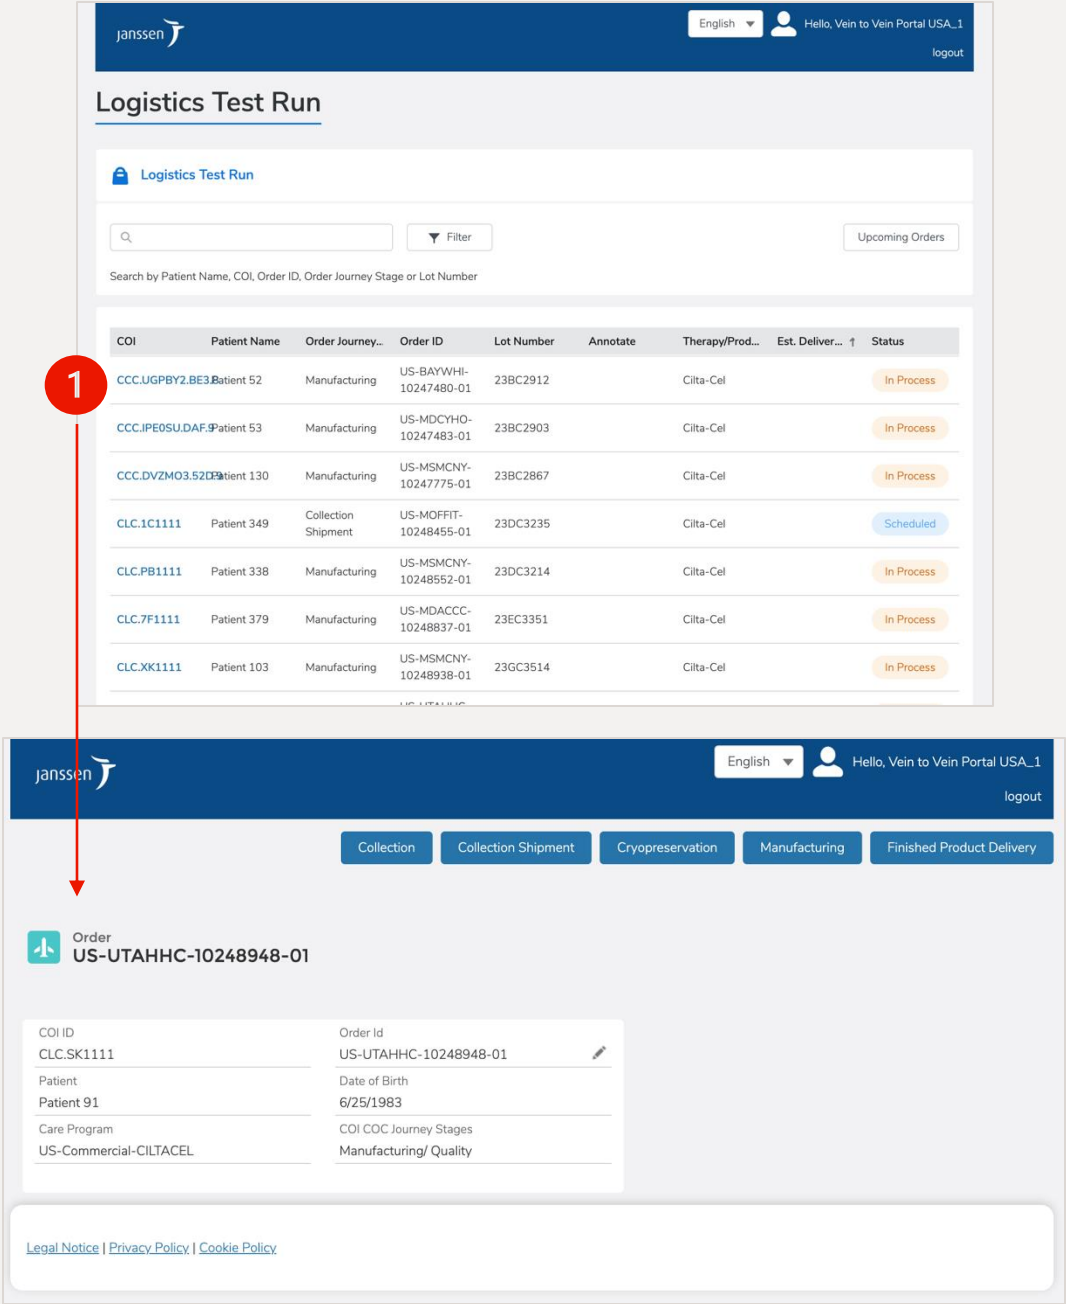

J&J Innovative Medicine

44

Opportunity

To access a workflow, one would need to press the COI on the landing page. This navigates them to a page, nicknamed the Intermediary page, with buttons to move to specific workflows as well as general order information.

Not only did this feel redundant to our users, but it also slowed them down. They would need to validate that they pressed the correct order by reviewing the order information on the Intermediary page. If it was the incorrect order, they would need to navigate back to the home page and search again for the correct order.

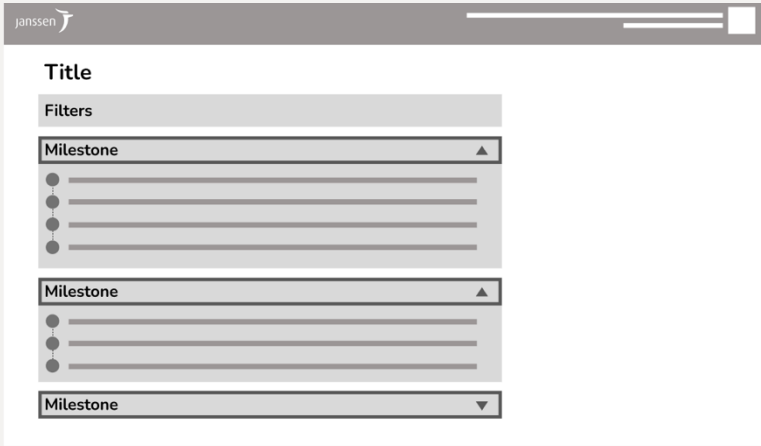

Option 1

Kanban-Inspired Landing Page

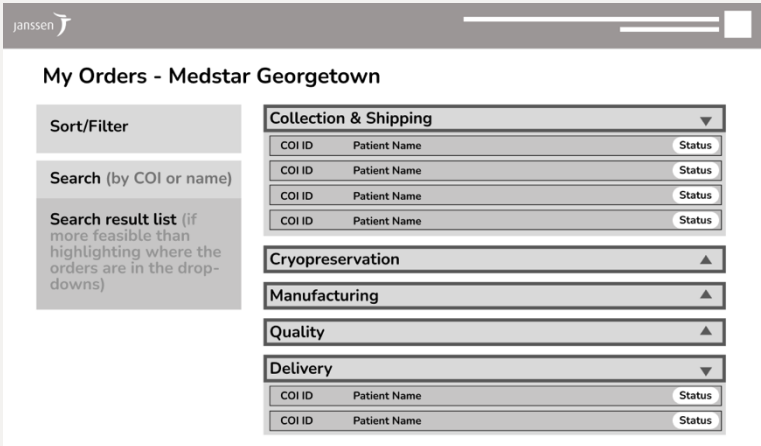

Show statuses of workflows within a milestone to provide visibility sooner than entering the intermediary page to identify what workflows need to be completed.

Show workflows and their statuses, but implies there is not a linear process

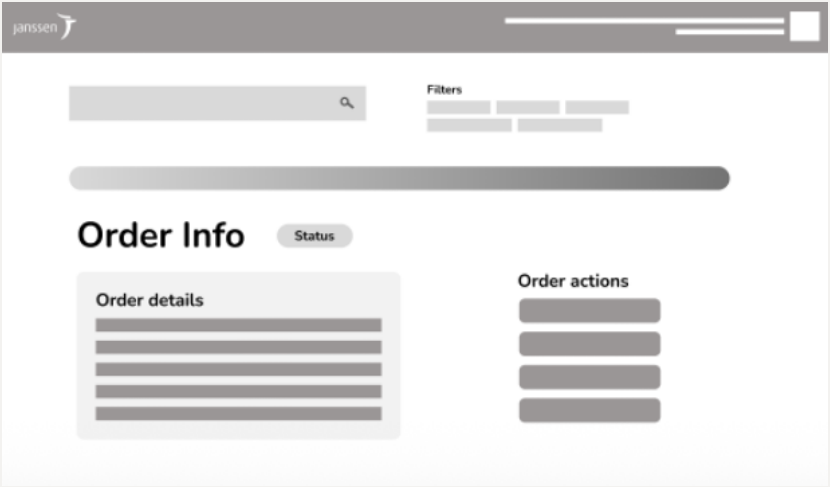

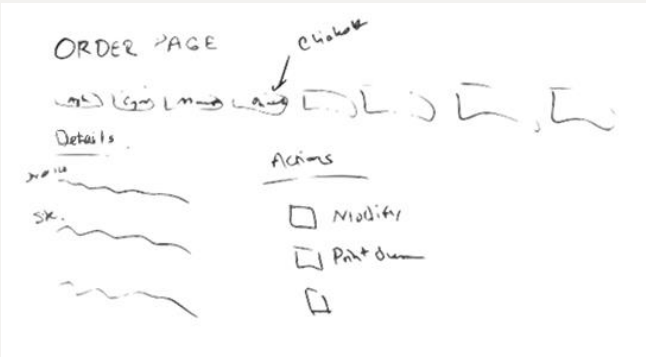

Shows workflow statuses while implying a linear process

Group orders by their milestone

Enhance Status Visibility on Intermediary Page

Show more detailed statuses of the workflows and the actions required to complete them.

Allow searching from intermediary page

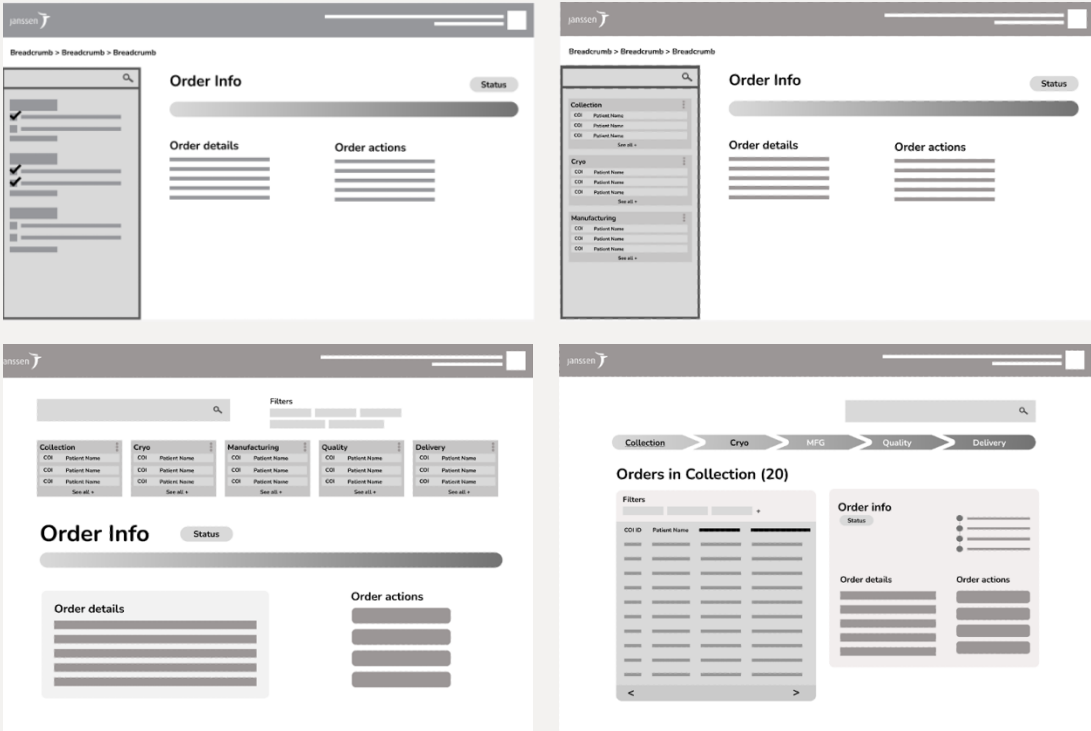

Show statuses of milestones more clearly

Option 3

Remove Intermediary Page

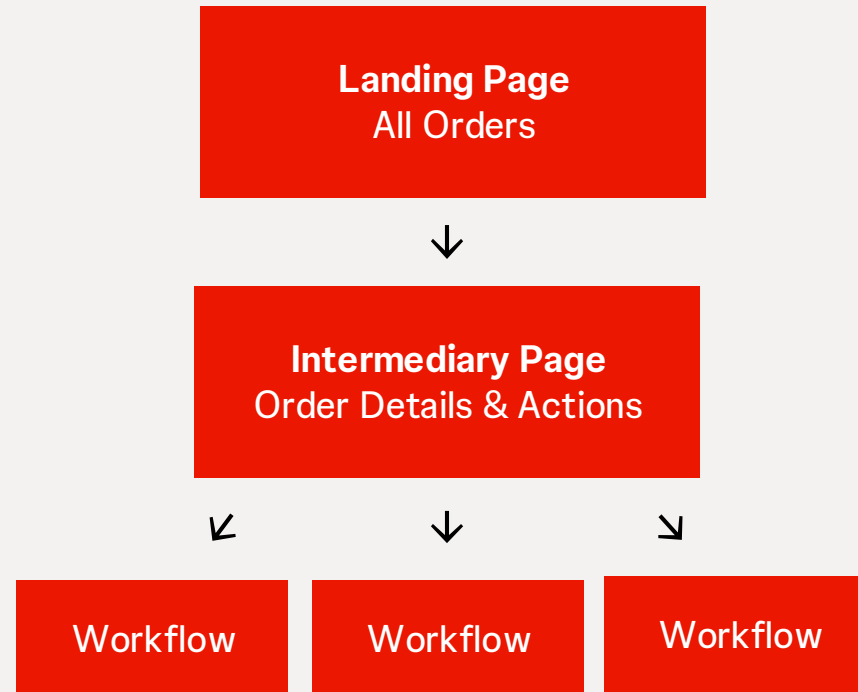

Show information needed to confirm the correct order on the landing page. Expediates order identification process, while providing an opportunity to show details of workflow status earlier in journey.

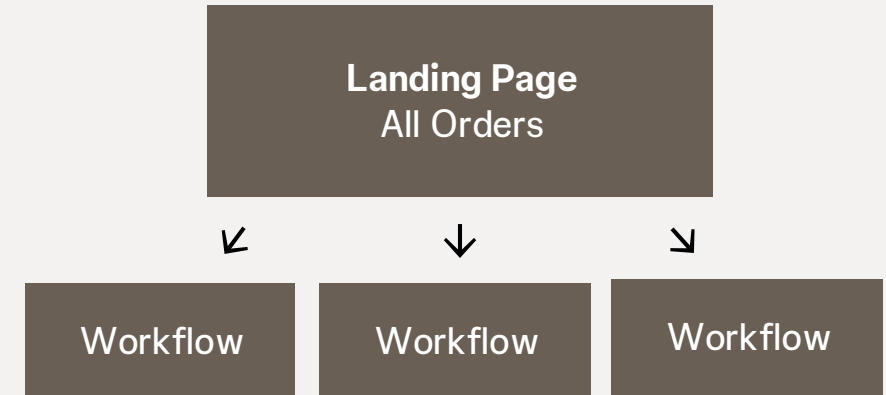

Reduce Redundancy

Users liked Options 1 and 3 because they felt that the intermediary page was redundant and didn't add value. However, they used the patient information on this page to confirm if the correct order was selected before entering their workflow.

Before

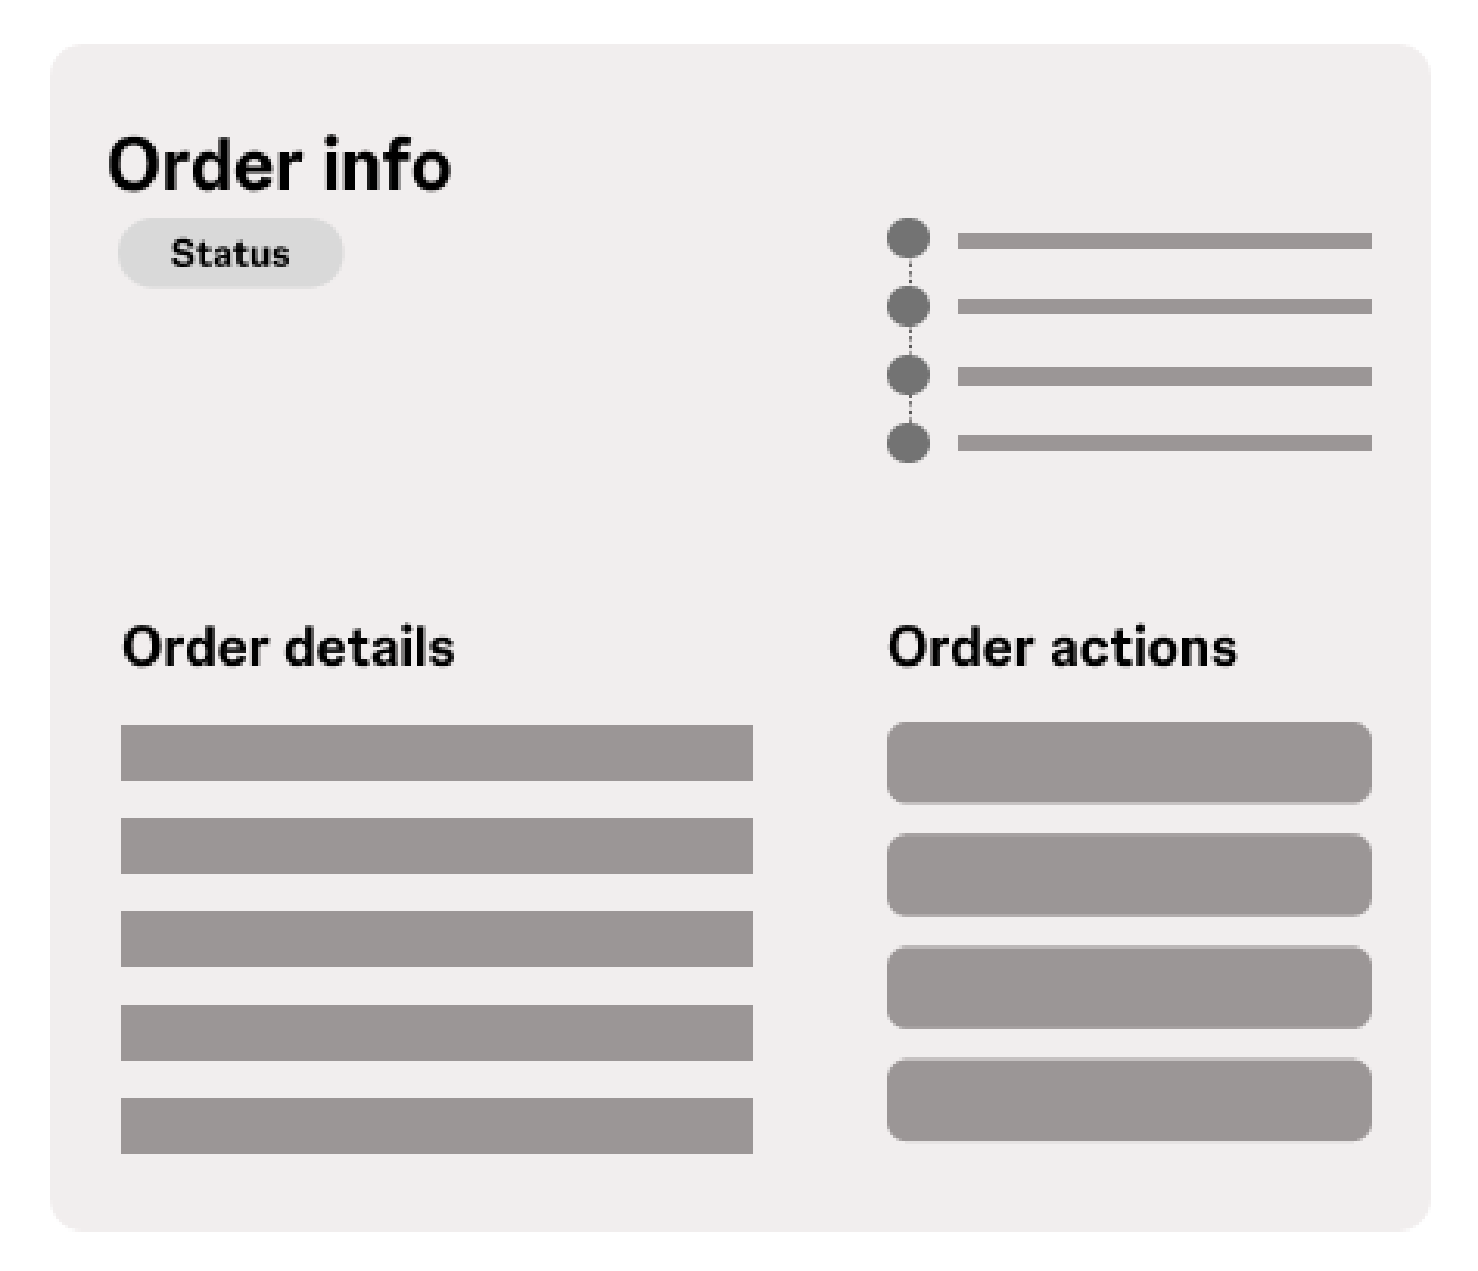

After

Added Side Panel

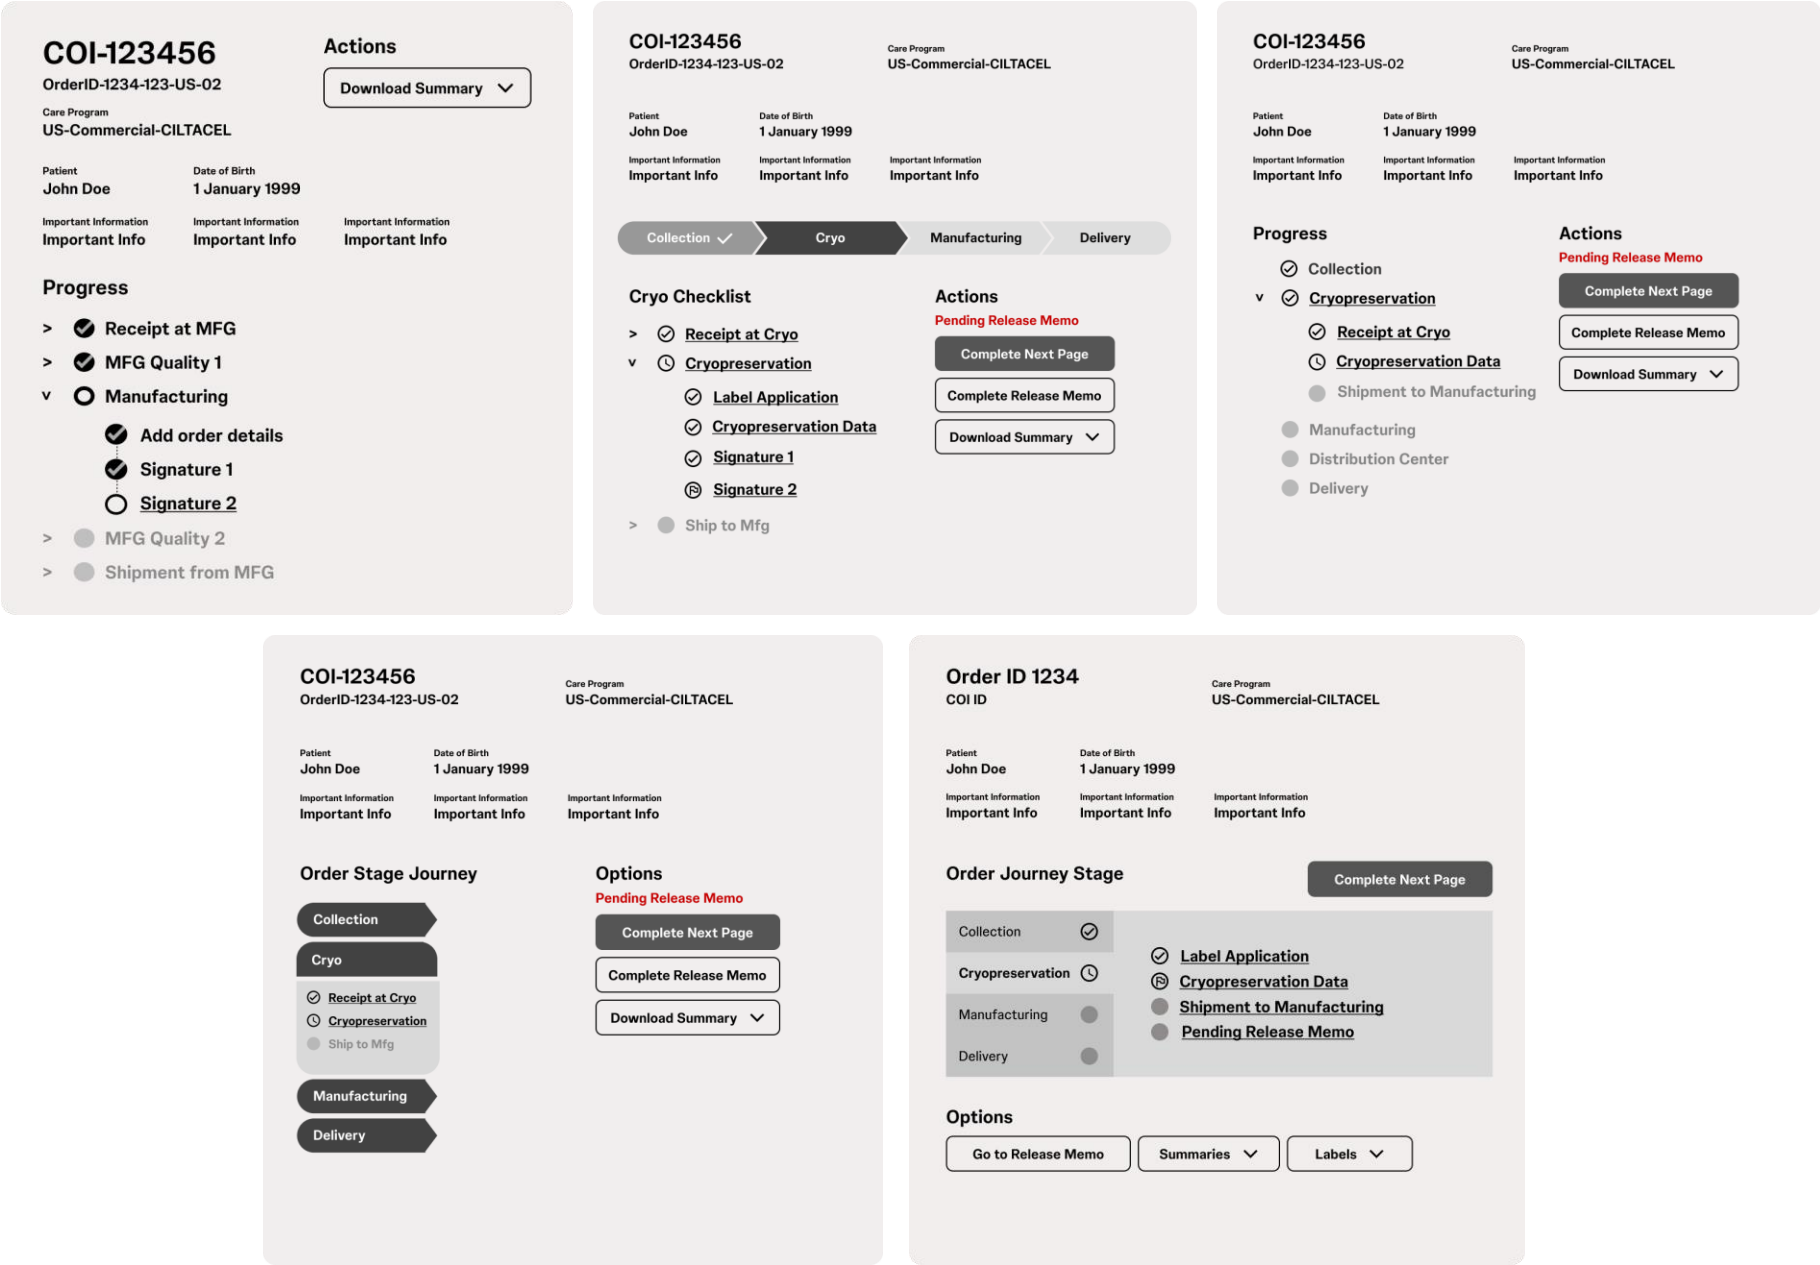

We decided to expediate their workflow by removing the intermediary page entirely and incorporated the information that they needed to identify the correct order onto the landing page. This allows them to more quickly switch between orders if they selected the incorrect order.

Side Panel Content Structure

We iterated on different ways of organizing the content in the side panel to consider:

- How might we quickly identify an incomplete workflow?
- How might we identify if we selected the correct order?
- How might we action on an order?

How Might We

Show Upcoming Orders?

Opportunity

It is challenging to navigate to the additional reports that are available to a user. They are hidden behind a drop-down on the Upcoming orders reports. How might we provide greater visibility into existing and future reports?

Progress

IDM

Collection

Shipment

More granular steps before collection/shipment is complete. Specific steps with underline will bring the user to that specific section in a flow.

Next step, what other actions? Can we put these download buttons on the flows?

this implies that there is an order than must be followed rather than they can click any button. IDM can be an action step. IDM and release memo can be action steps

Add export options within the page flows

are the numbers valuable to the users?

as long as status/milestone is covered somewhere else, we dont need it in the table

How Might We

Quickly Move Through A Workflow?

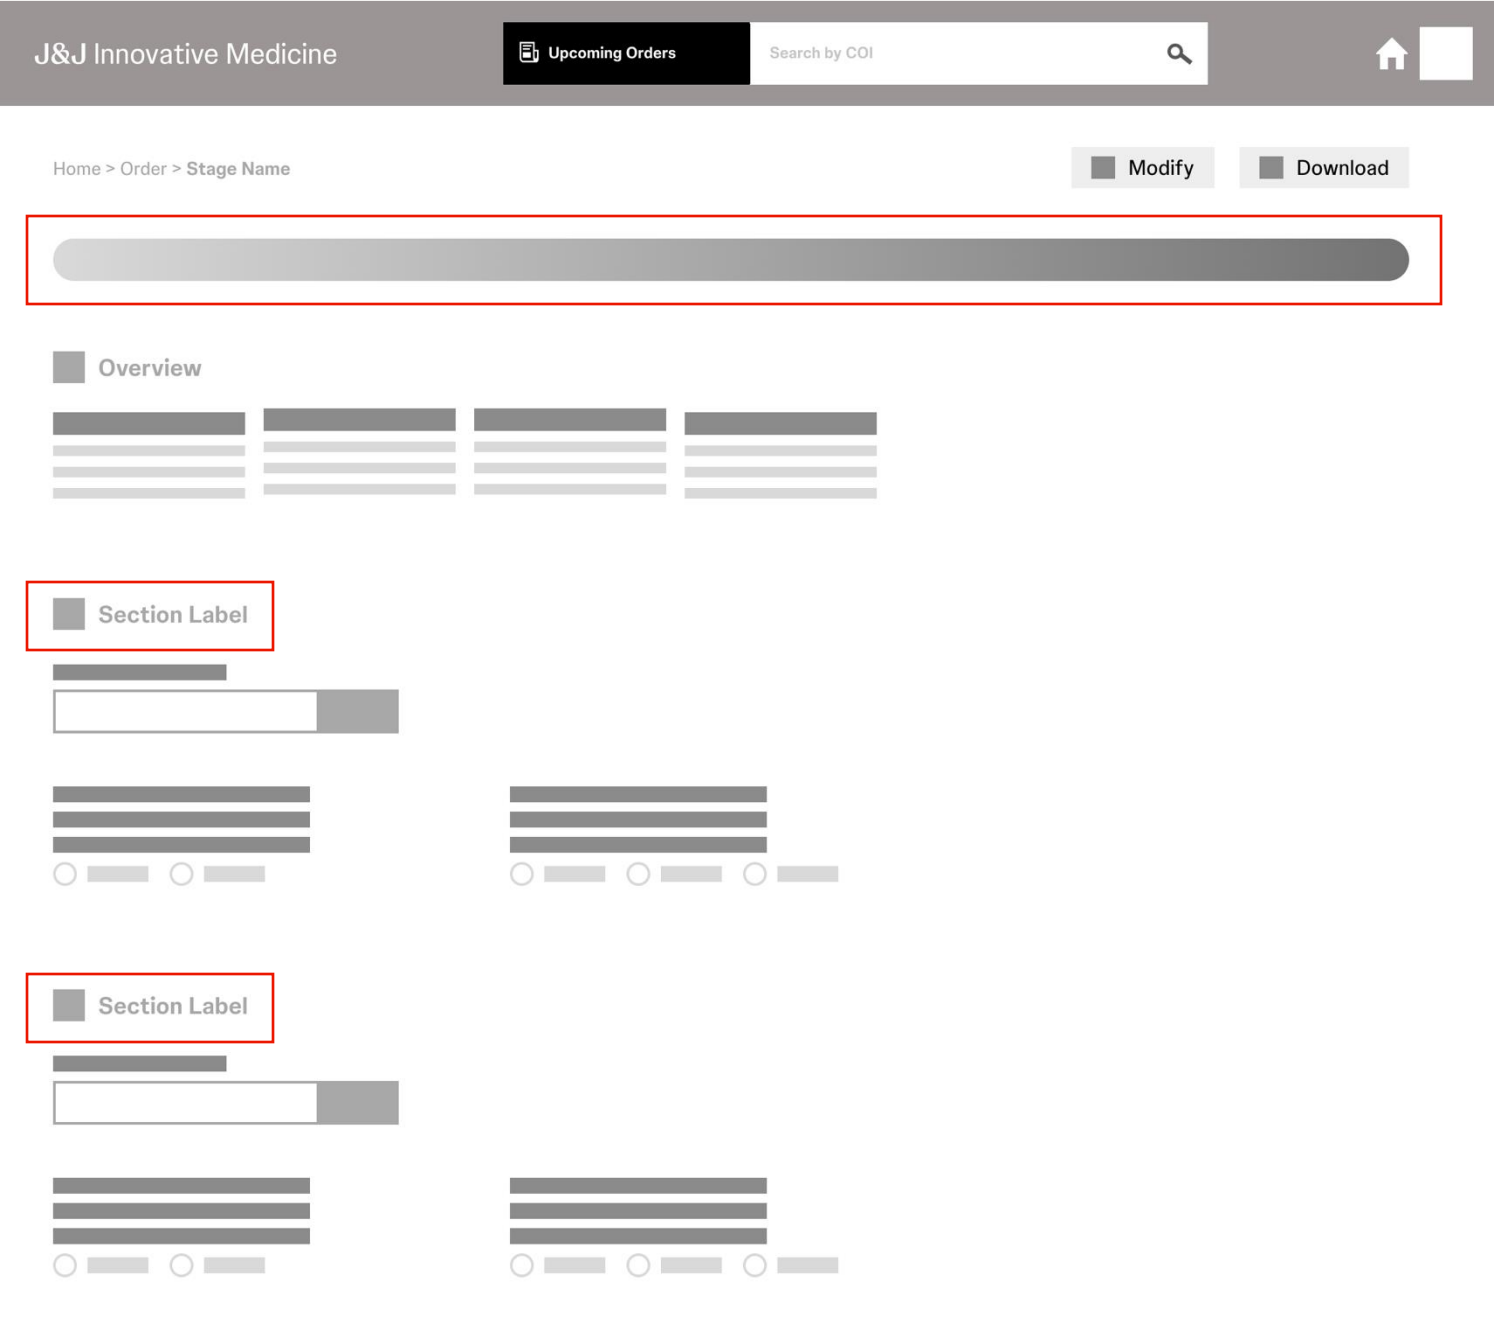

Opportunity

Tasks are contained to their own workflow pages. We looked to explore ways of expediting how one moves to a new section of the page with the goal of decreasing task completion time.

Option 1

Add Interactivity to Status Tracker

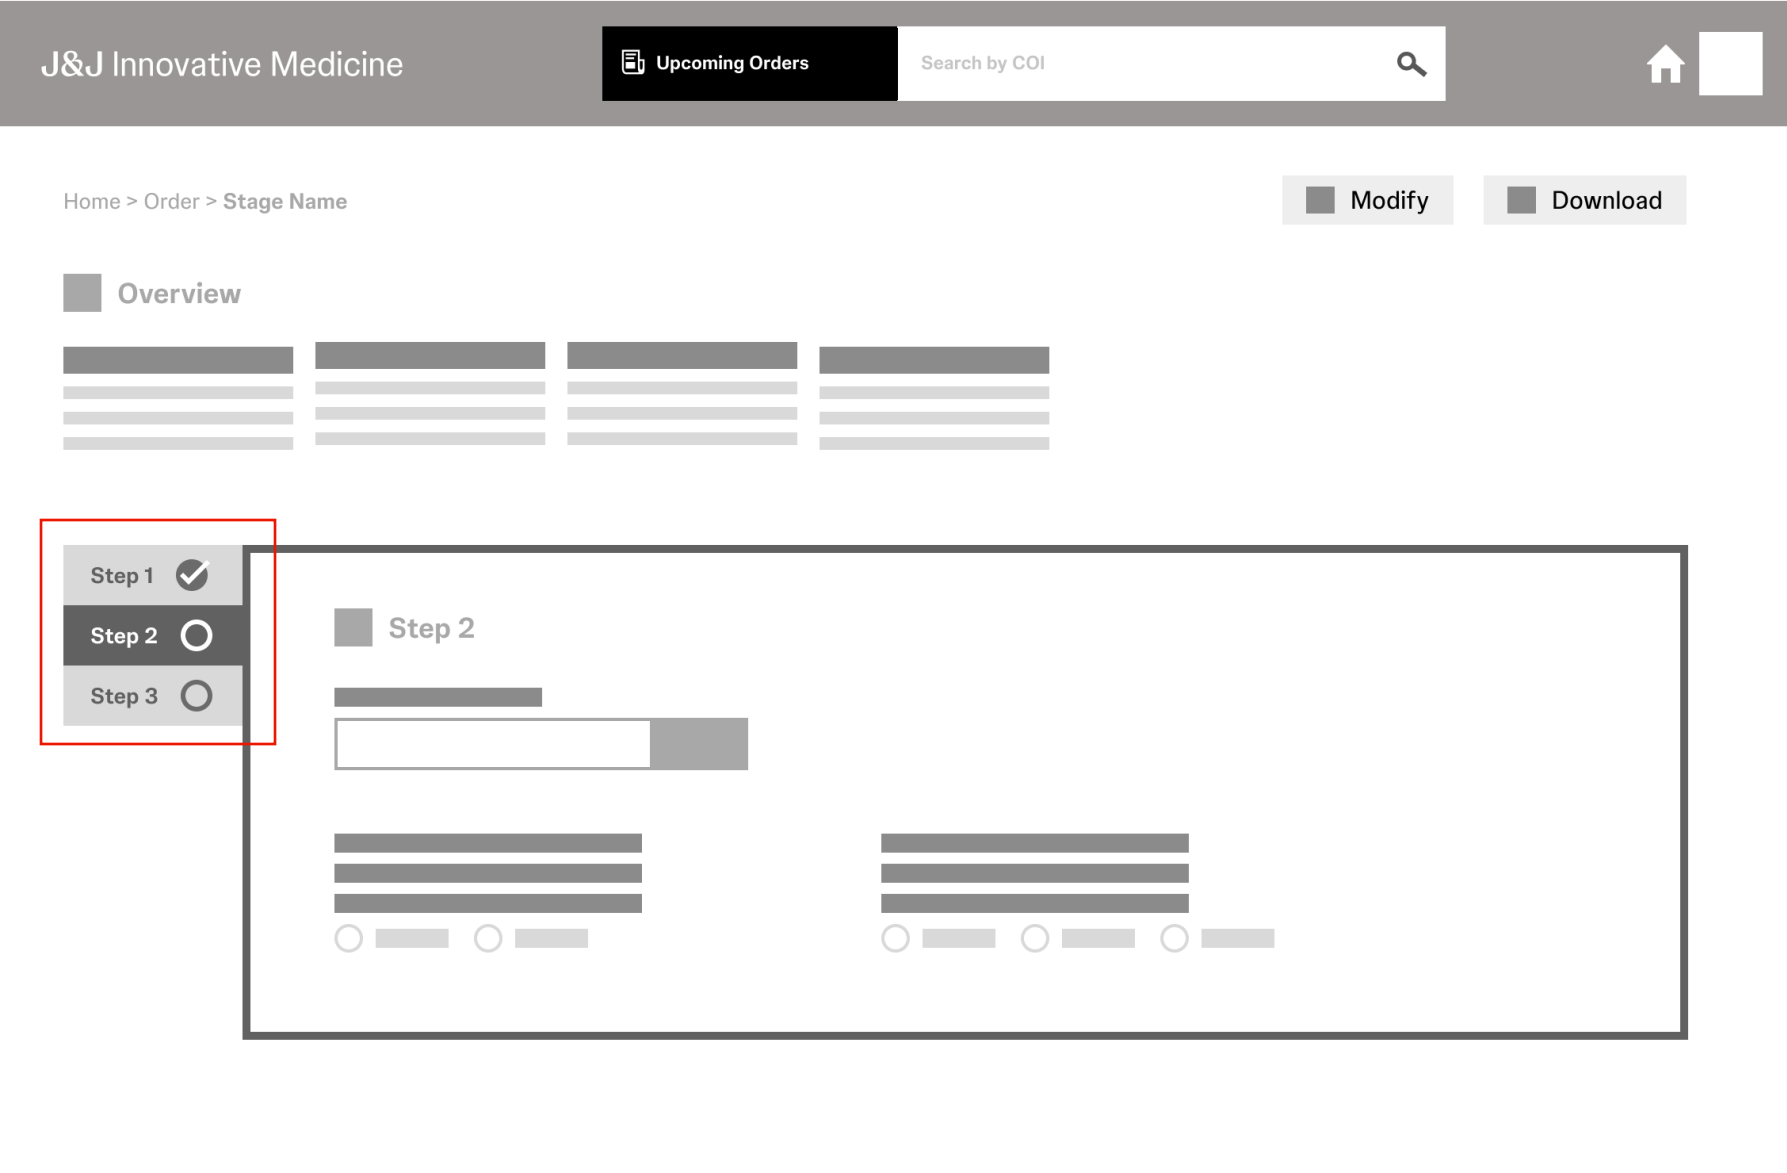

Current state of status tracker has interactive states with no interaction. This could be leveraged to add interactivity to the “pizza” status tracker. The section in the tracker could be pressed, and the screen could scroll to that section.

Option 2

Side Panel with Tabs

Reformat page so that the sections are grouped into their own tab. Each tab includes its completion status.

Outcome

We decided not to proceed with either options:

1

Add Interactivity to Status Tracker

The status “pizza” tracker has been too commonly seen as not being interactive even though it has a hover and active status. We hypothesized that this would lead to low adoption if we were to make it interactive.

2

Side Panels with Tabs

For the side panel with tabs, the engineering team investigated the t-shirt sizing, and it was too high for this option to be considered.

How Might We

Provide Clearer Navigation to Landing Page?

Opportunity

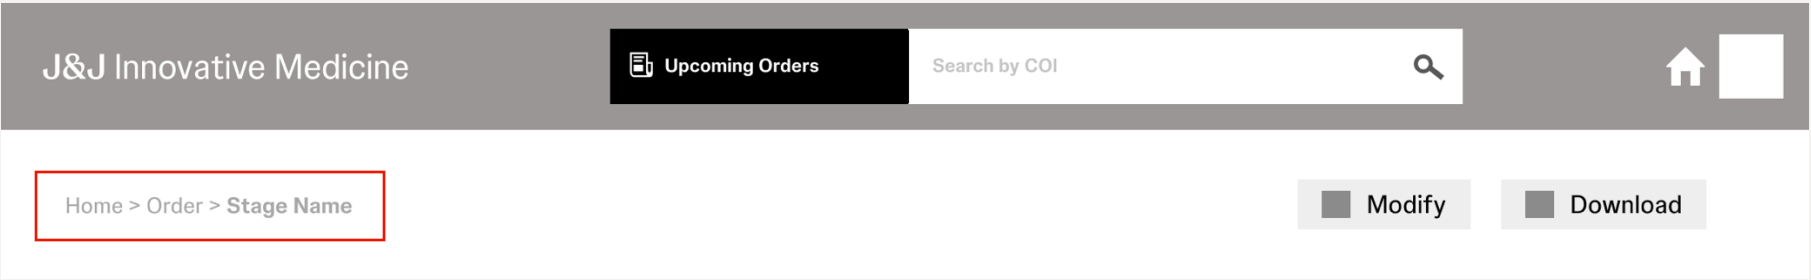

Prior to this initiative, the only way to return to the landing page was pressing the logo in the top-left corner of the navigation or to press the browser's back arrows until you returned to the landing page.

While the logo is a common pattern to return home in NA, our research revealed that it was not as common of an interaction in EMEA. This led to challenges for new EMEA users and users who infrequently used the platform to recall how to return to the home page.

Option 1

Interactive Breadcrumbs

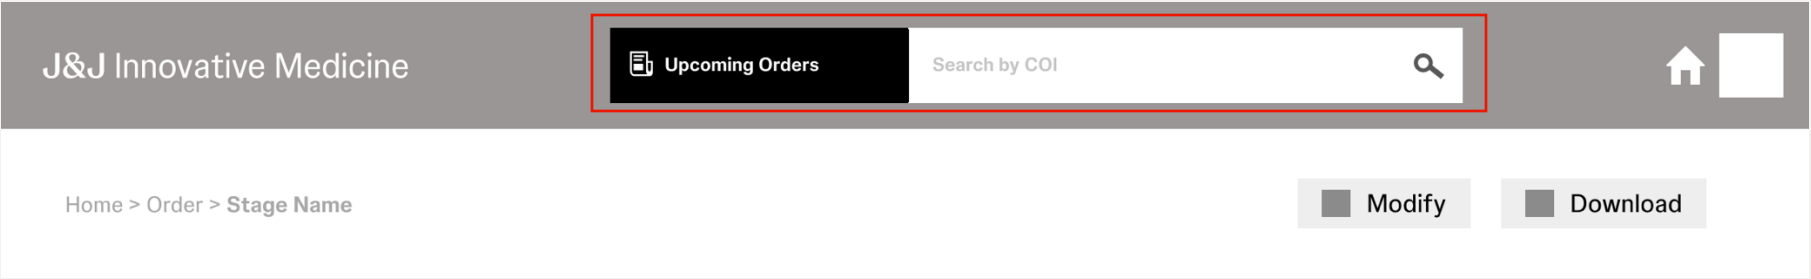

Allow quick movement
between landing page and
order-specific information.

Option 2

Global Search

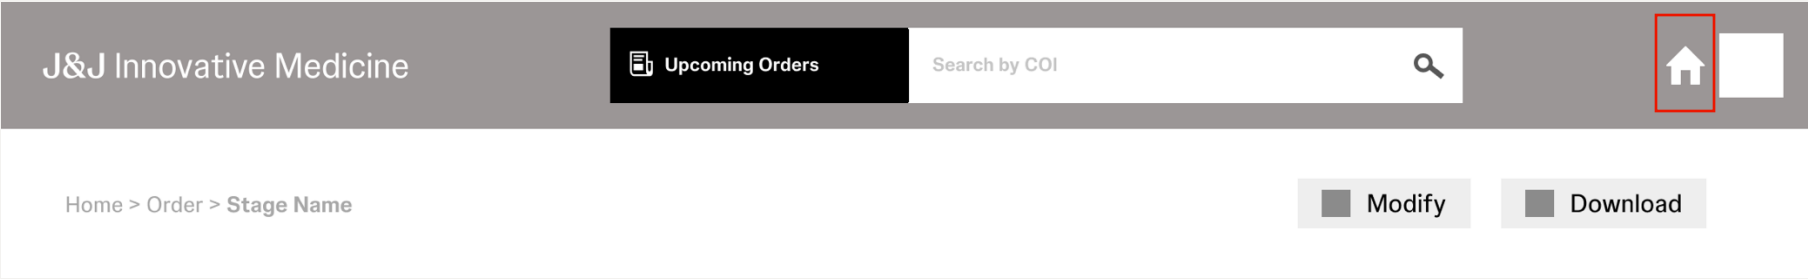

Ability to search for an order from any page, which doubles as navigation to landing page while expediting search process.

Option 3

Add Home to Navigation

Add a home icon to create a more recognizable pattern of returning to the home page.

Outcome

We decided not to proceed with either options:

1

Interactive Breadcrumbs

While the text of the breadcrumb was not high technical effort, the ability to provide a deep link to the order's side panel would be extremely high in effort to incorporate into all workflow pages. We decided not to pursue this due to the high-tech effort.

2

Global Search

With the portal being built on Salesforce, incorporating a global search would be challenging for compiling search results. Although it would yield helpful results, it would be a big technical lift to pursue.

Home Icon

The home icon was identified as being universally recognizable. This minimizes need for translations, while also providing a more recognizable way of returning to the landing page.

How Might We

Quickly Navigate Between Workflows?

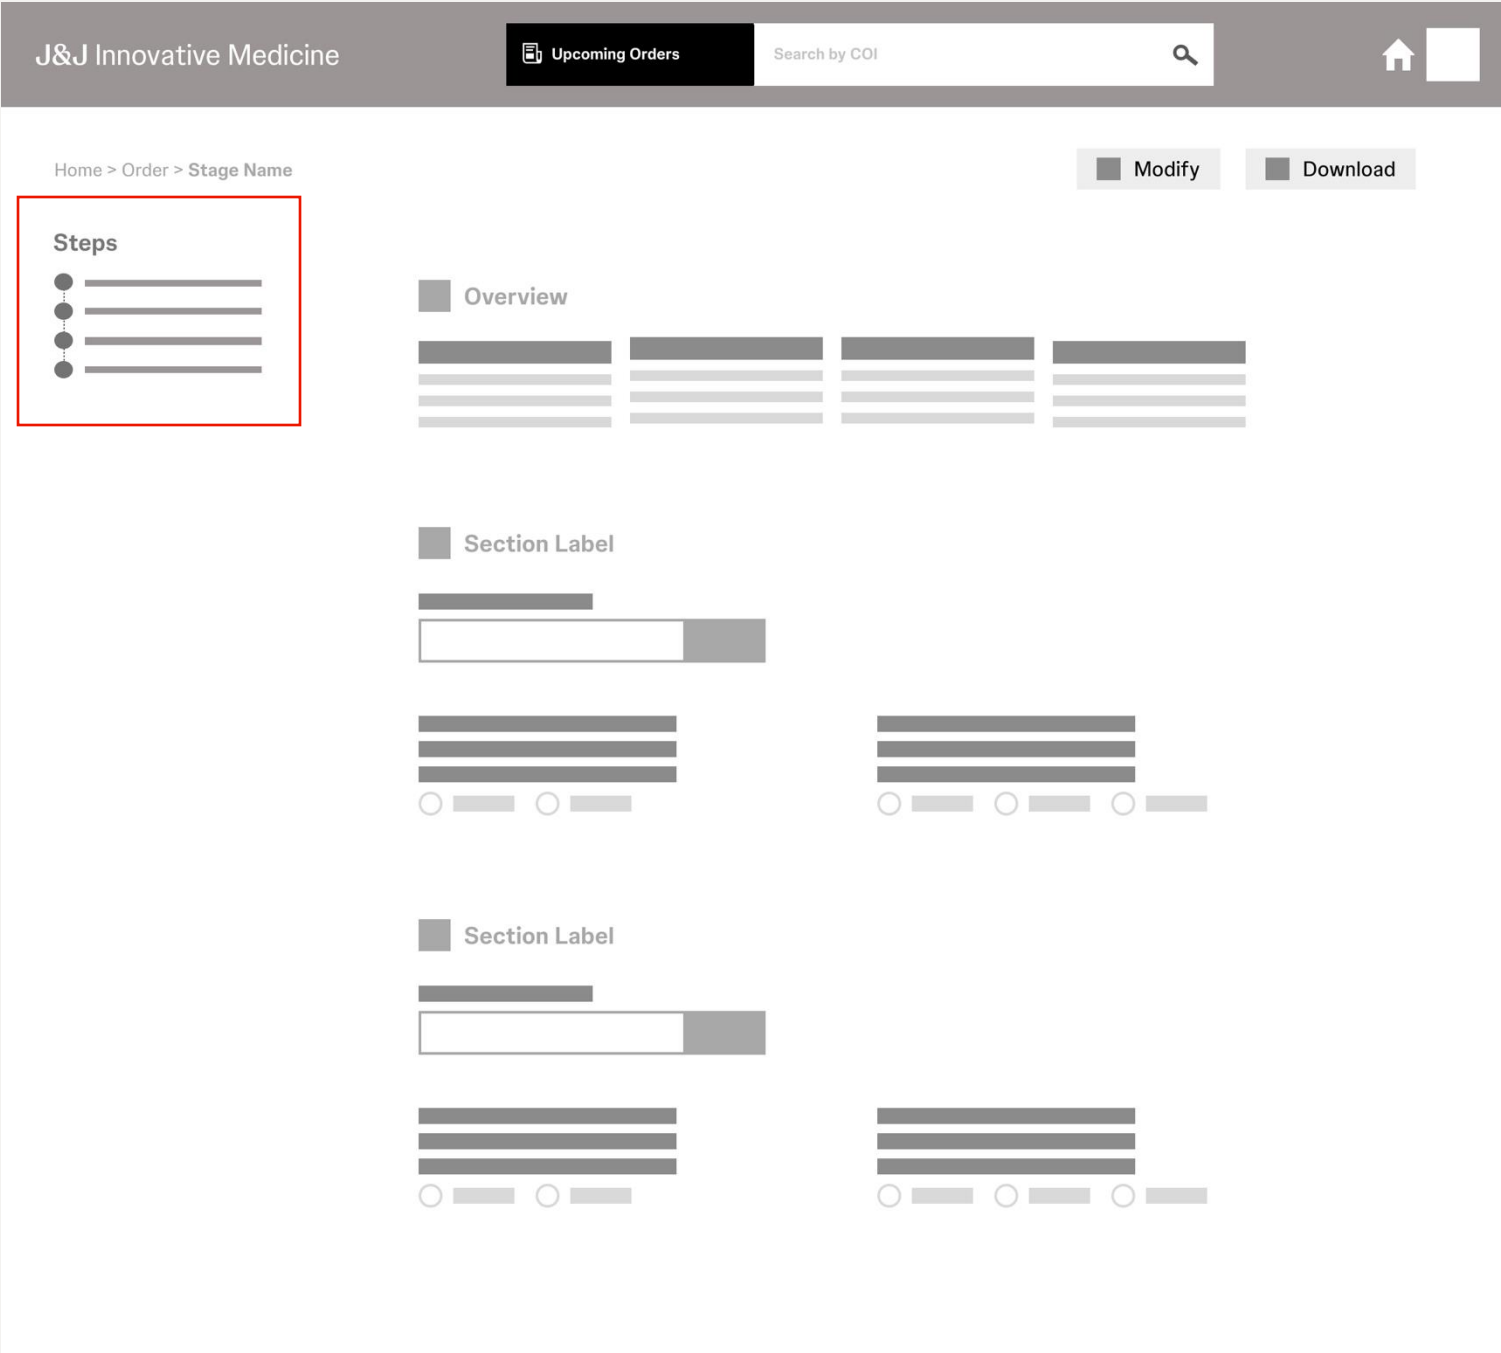

Opportunity

Because task-specific workflows exist on separate page, it was time-consuming to enter a separate workflow from the one you were currently on. This required returning to the home page, finding that order again, and pressing the other workflow once the order page was opened.

Option 1

Inter-Workflow Navigation

Navigation between other workflows to reduce need to return to intermediary page and select a new page.

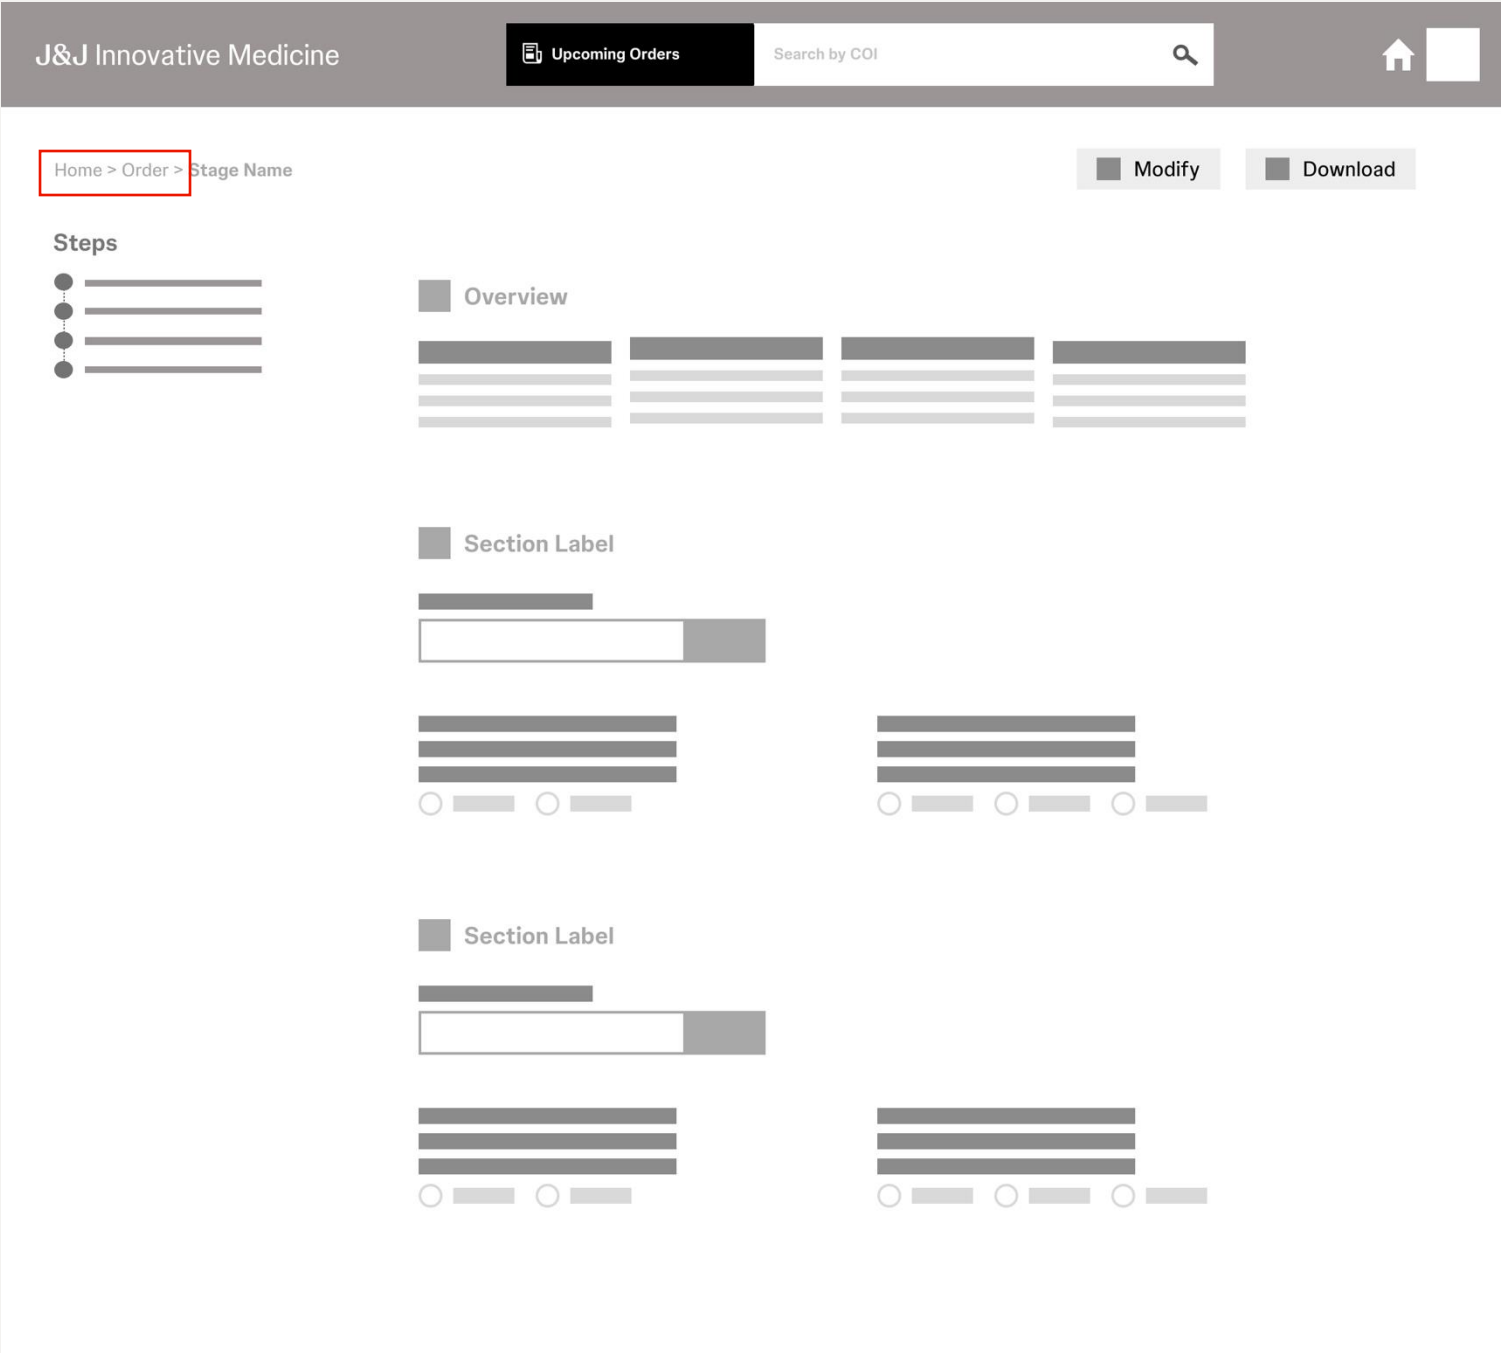

Option 2

Interactive
Breadcrumbs

Use breadcrumbs to quick link to the landing page, followed the proposed side panel on the landing page with that specific order by pressing the Order ID. This allowed one to switch between workflows from the landing page more easily.

Unfortunately, this required too much tech effort for each workflow.

Iteration

After ruling out breadcrumbs, we explored many iterations of the checklist. We looked at showing individual workflows, versus larger stages that housed workflows as well as separating non-linear tasks into their own section.

Workflow-Specific

To increase non-linear workflow completion, we incorporated those workflows into the checklist in the most common order that they are completed in.

We incorporated workflow statuses to highlight incomplete workflows and ones with missing signatures.

How Might We

Quickly Identify an Order?

Opportunity

The only way to identify an order was the patient or product information that varied for each workflow.

There was also no indication of which workflow that one had selected other than the breadcrumb and familiarity with the system.

J&J Innovative Medicine

Patient Verification: Percy Weasley

In Process

Verify patient name and date of birth using a Government Issued Identity Document

First Name	Middle Name	Last Name	Date of Birth	Collection Date	Treatment Site
Percy		Weasley	5/12/1986		Treatment Site001_Tes
COI	Order ID	Therapy/Product			
CLC.3C3111	US-TRTTRT001-int-00	Cilta-Cel			

Confirmation

Apheresis Operator 1

11/9/2022, 5:26:02 AM PST

I confirm the identity of the patient has been verified.

Verification

Apheresis Operator 2

11/9/2022, 5:26:30 AM PST

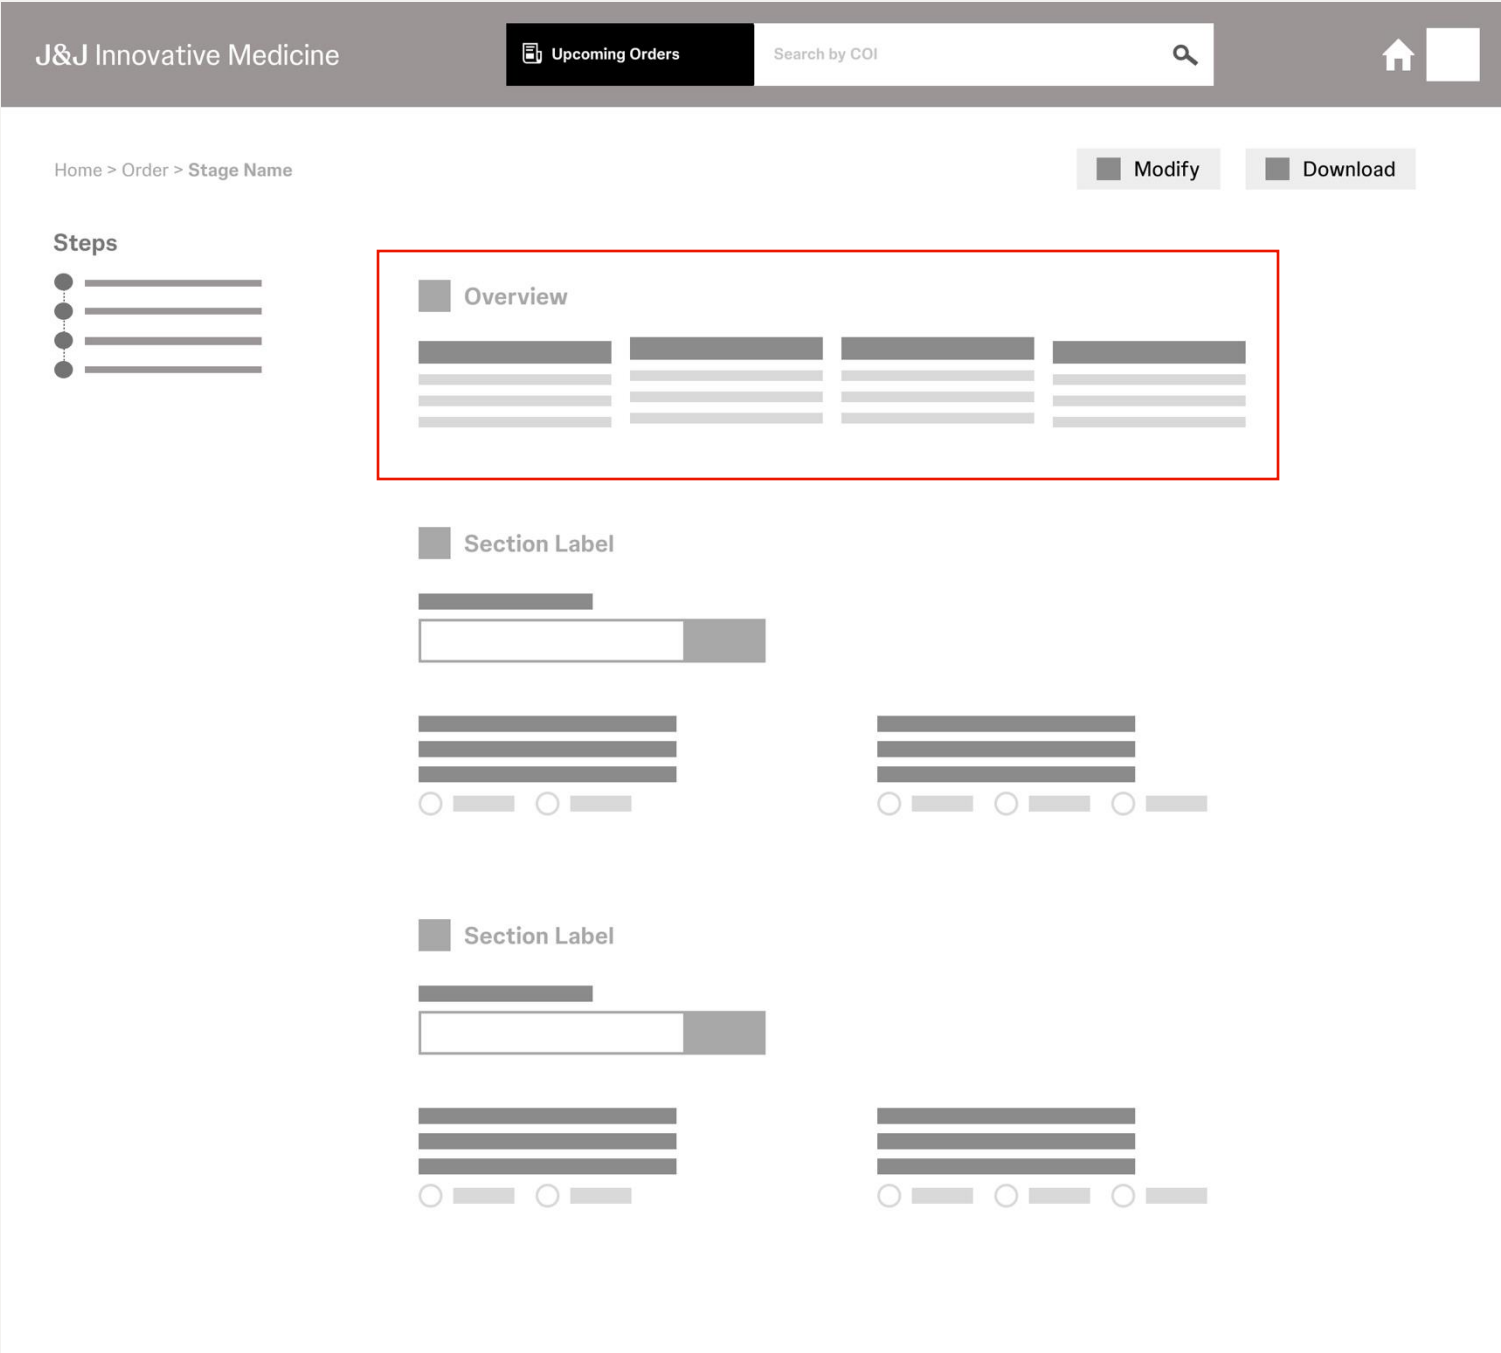

I verify the identity of the patient has been verified.

Collection Data

Option 1

Order Overview

Add a section with key information to an order that allows a user to more quickly identify if they have selected the correct order.

Add the page title onto the top of the workflow for quick identification.

[Home](#) > [US-MSKCCS-test-6912](#) > Collection Data

Collection Data

 Order Overview

Care Program	Order ID	COI ID
US-Commercial- CILTACEL	US-MSKCCS-test-6912	CLC.2E4111

 You have completed this flow successfully and can now download the summary

Option 3

Order ID in Breadcrumb

Incorporate the Order ID into the breadcrumbs. As previously mentioned, the breadcrumbs were too high of technical effort to implement across all the workflows.

[Home](#) > [US-MSKCCS-test-6912](#) > Collection Data

Collection Data

[Order Overview](#)

Care Program	Order ID	COI ID
US-Commercial- CILTACEL	US-MSKCCS-test-6912	CLC.2E4111

You have completed this flow successfully and can now download the summary

How Might We

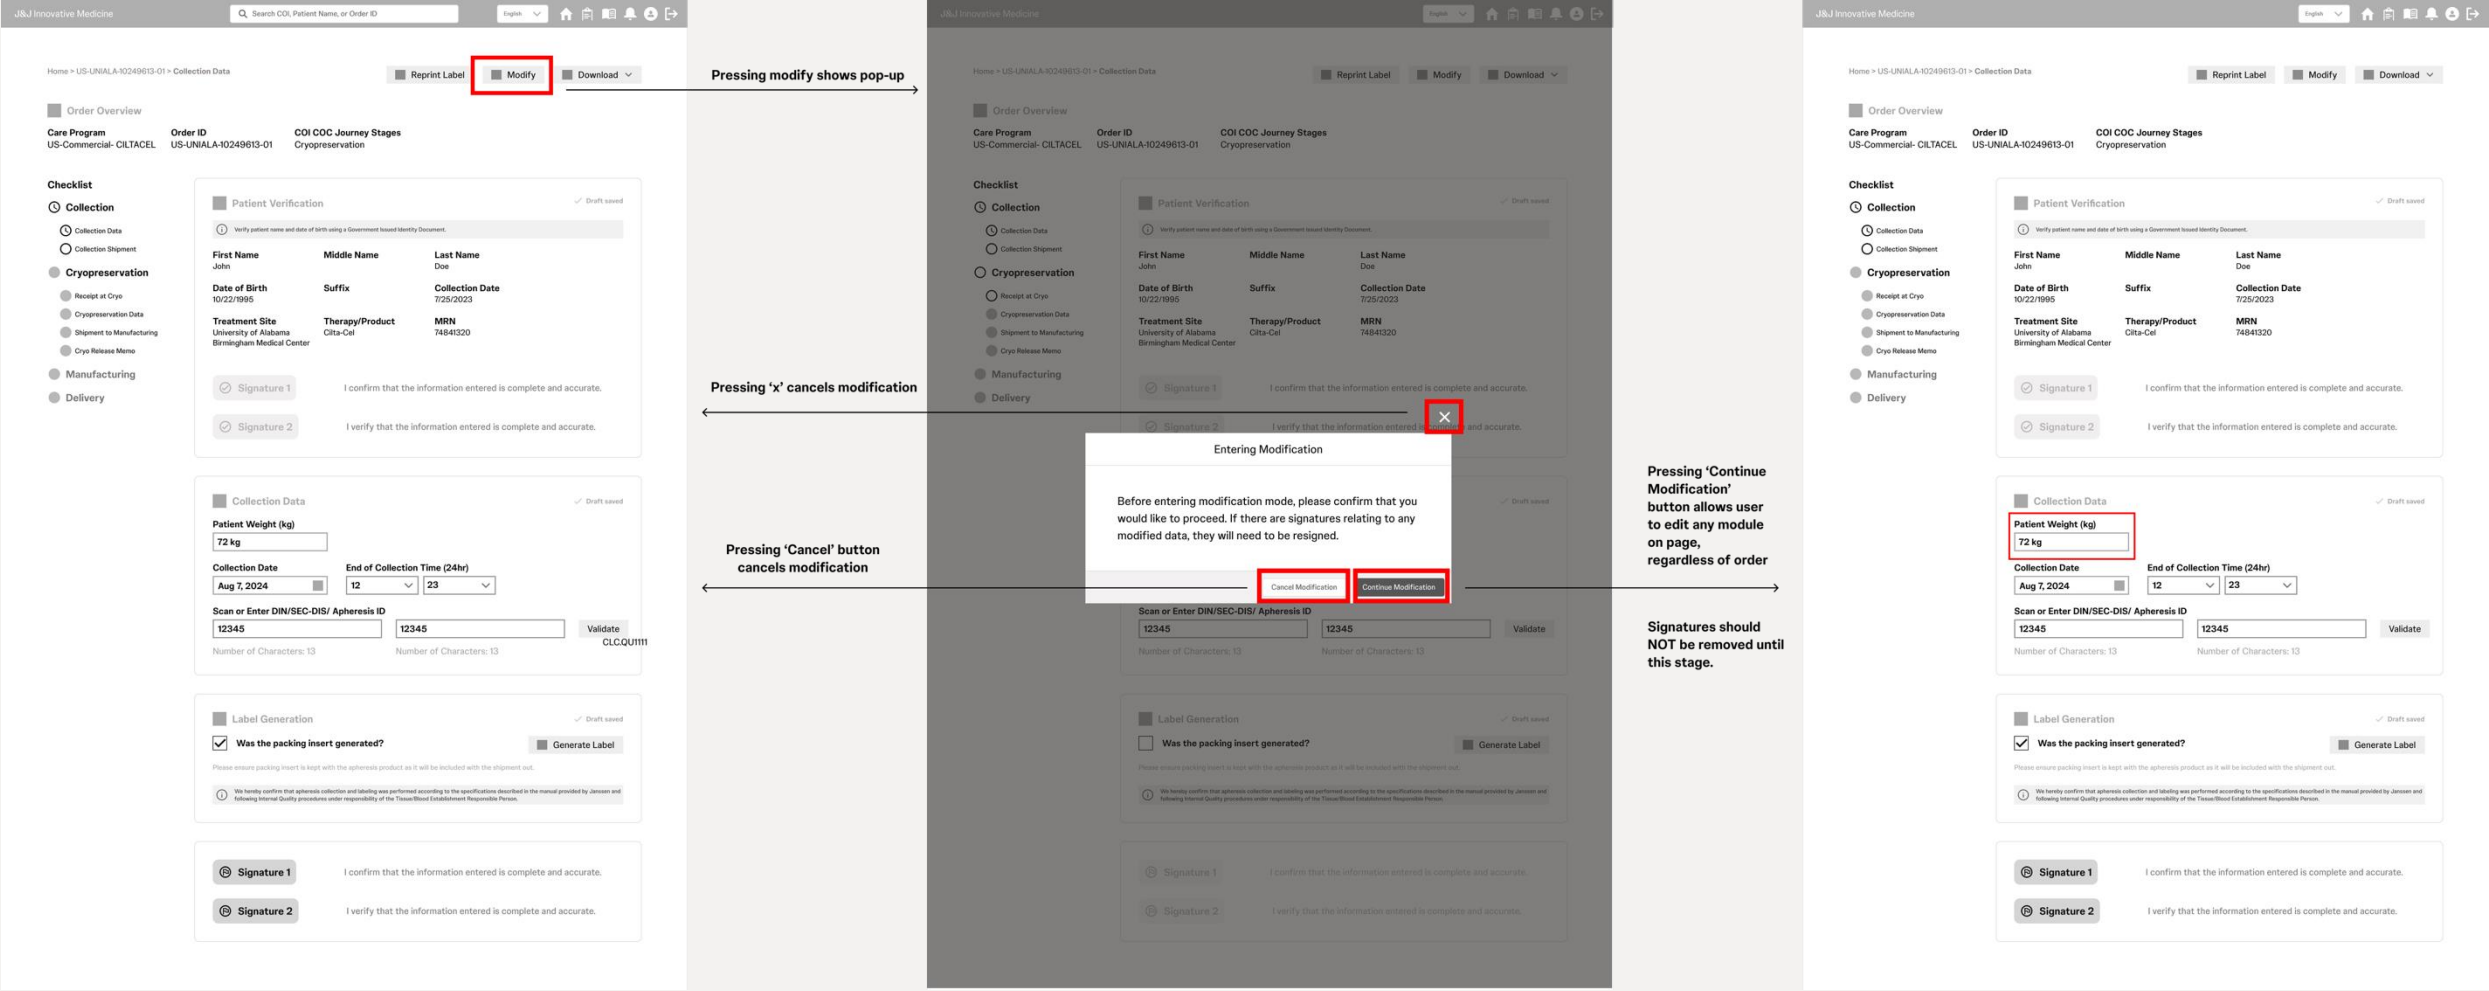

Reduce Incomplete Modifications?

Opportunity

New users would occasionally press the “Modify” button but not resign the workflow. Without signatures, even if no modifications were made, the order would be marked incomplete. This leads to quality compliance issues, especially if that order has moved farther along in its journey.

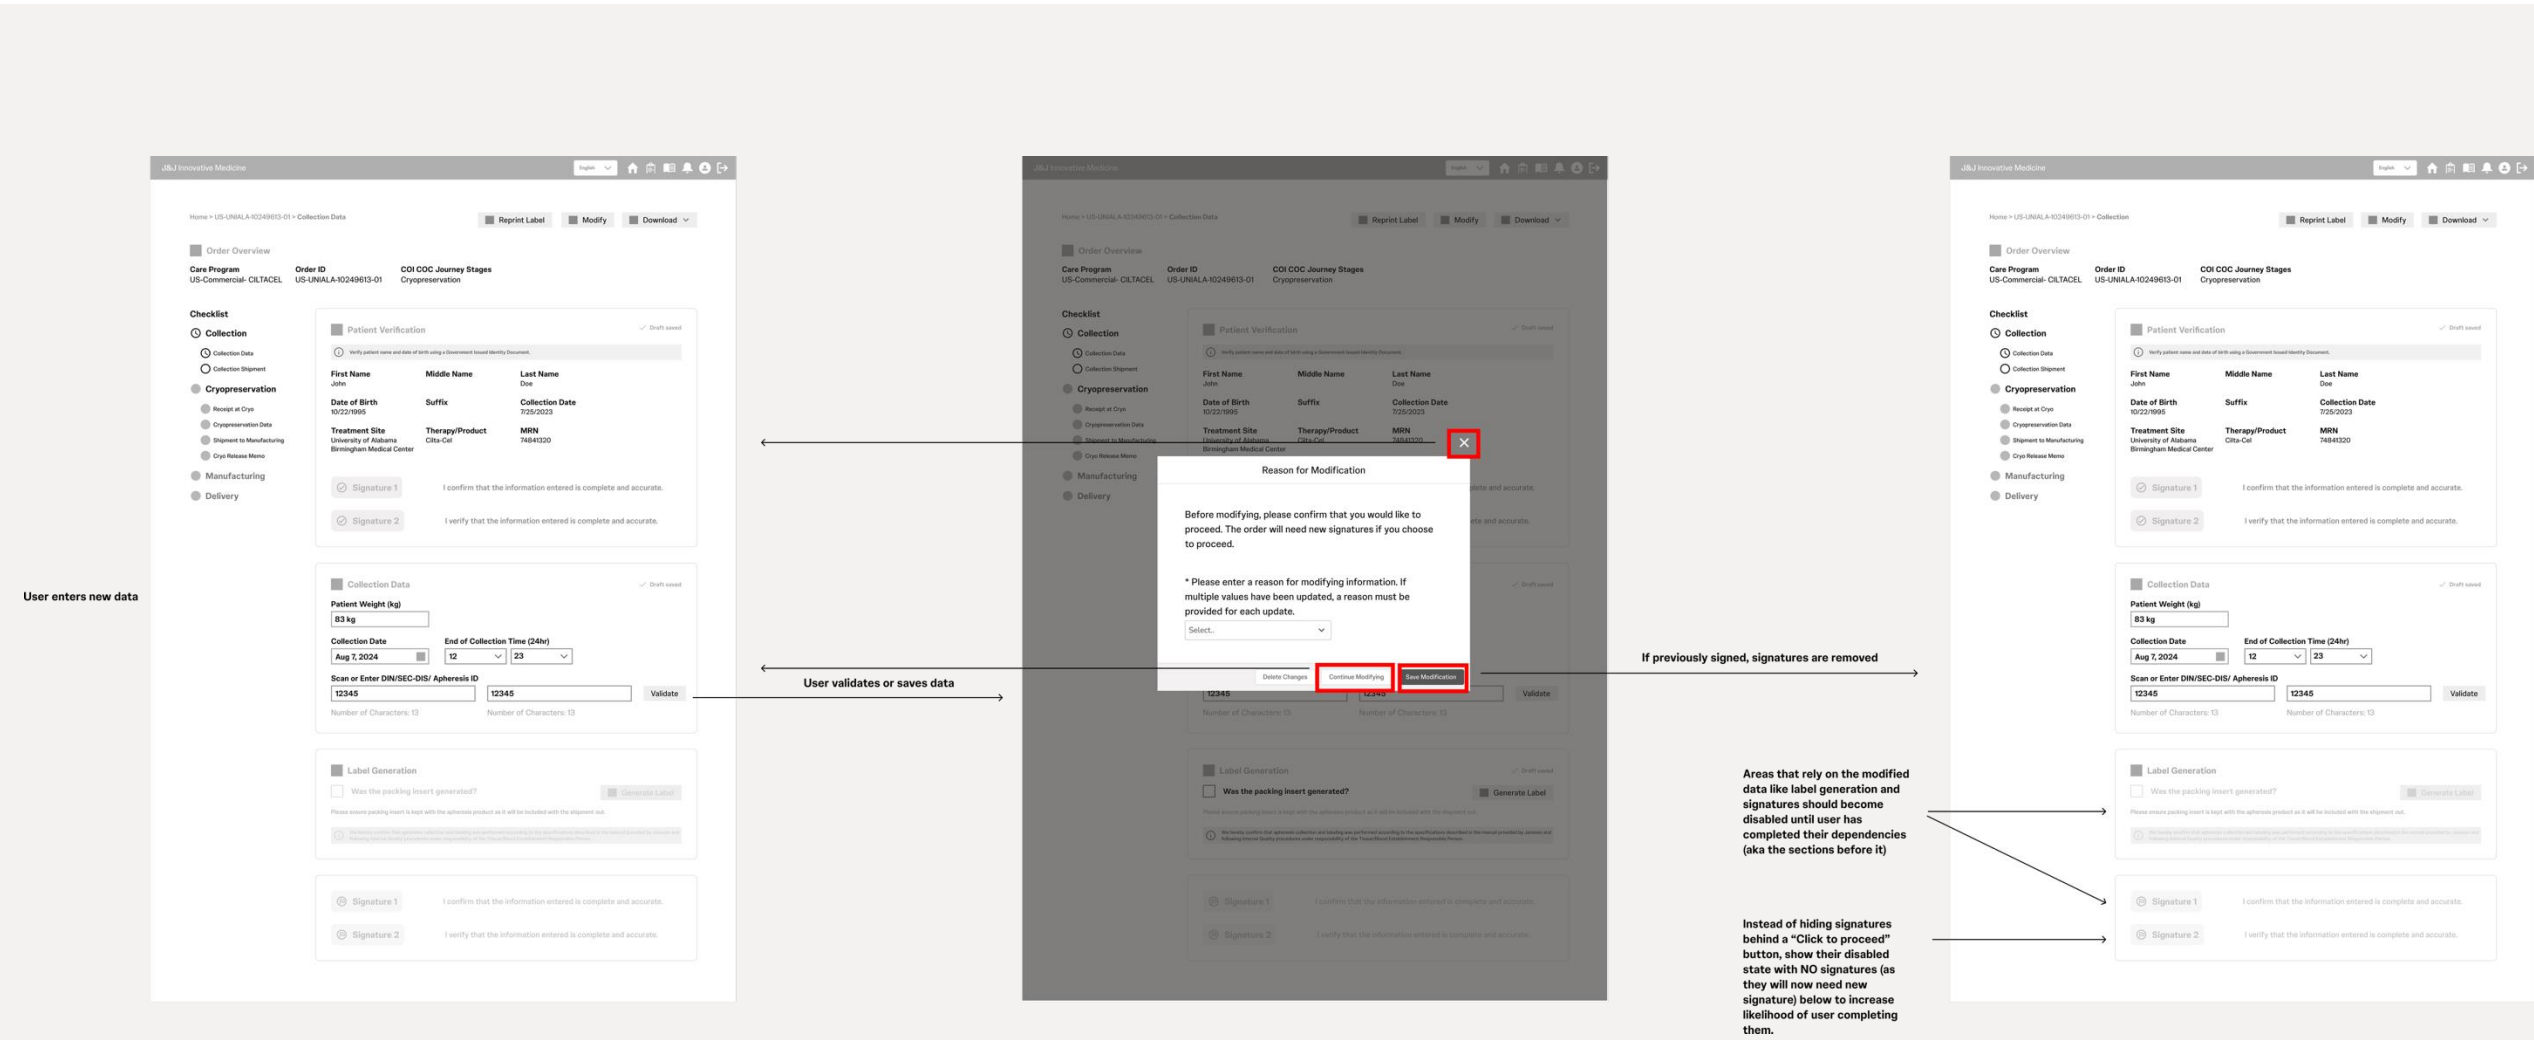

Modification Mode

Incorporate the Order ID into the breadcrumbs. As previously mentioned, the breadcrumbs were too high of technical effort to implement across all the workflows.

Modification Mode

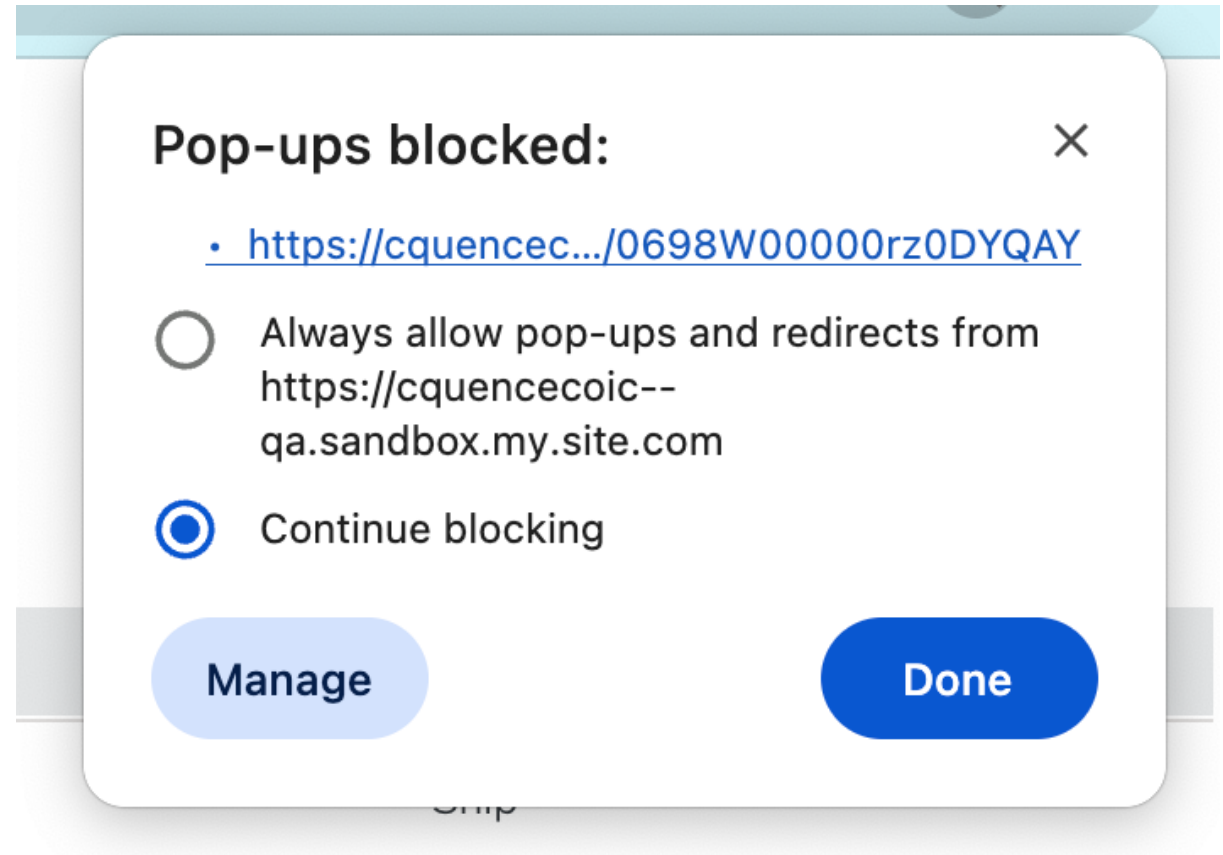

Incorporate the Order ID into the breadcrumbs. As previously mentioned, the breadcrumbs were too high of technical effort to implement across all the workflows.

How Might We Reprint Labels?

Opportunity

Different browsers and computers have difficulties to download and print labels from the platform. This results in some users needing to modify the workflow just to regenerate or reprint labels. This was identified as the most common reason that people modify a page.

Option 3

Request Reprint

Provide user a way to request a reprint directly in their workflow. This would create a new section to reprint the label in.

How Might We

Reduce Time to Track Shipments?

Opportunity

Sites are directly sent emails directly from the couriers for their deliveries. This can be challenging to navigate and track for a specific order. How might we integrate tracking information into our platform to reduce the time it takes to look for the tracking information of a specific order?

Option 1

Integrated into Side Panel

On landing page, incorporate the shipment status on the side panel.

Signature 1

I confirm that the information entered is complete and accurate.

Outcome

We decided not to proceed with either options:

1

Integrate into Side Panel

Not all couriers expose the data of if a shipment is in transit or delivered. This could pose issues as we scale and add new couriers that may not provide enough data to configure this solution.

2

Incorporate into Workflow

Similarly, not all couriers provide detailed updates on the shipments. This would make a concept like this challenging to incorporate. For the couriers that do provide updates on shipments, they are inconsistent in the stages tracked.

How Might We

Quickly Upskill a New User?

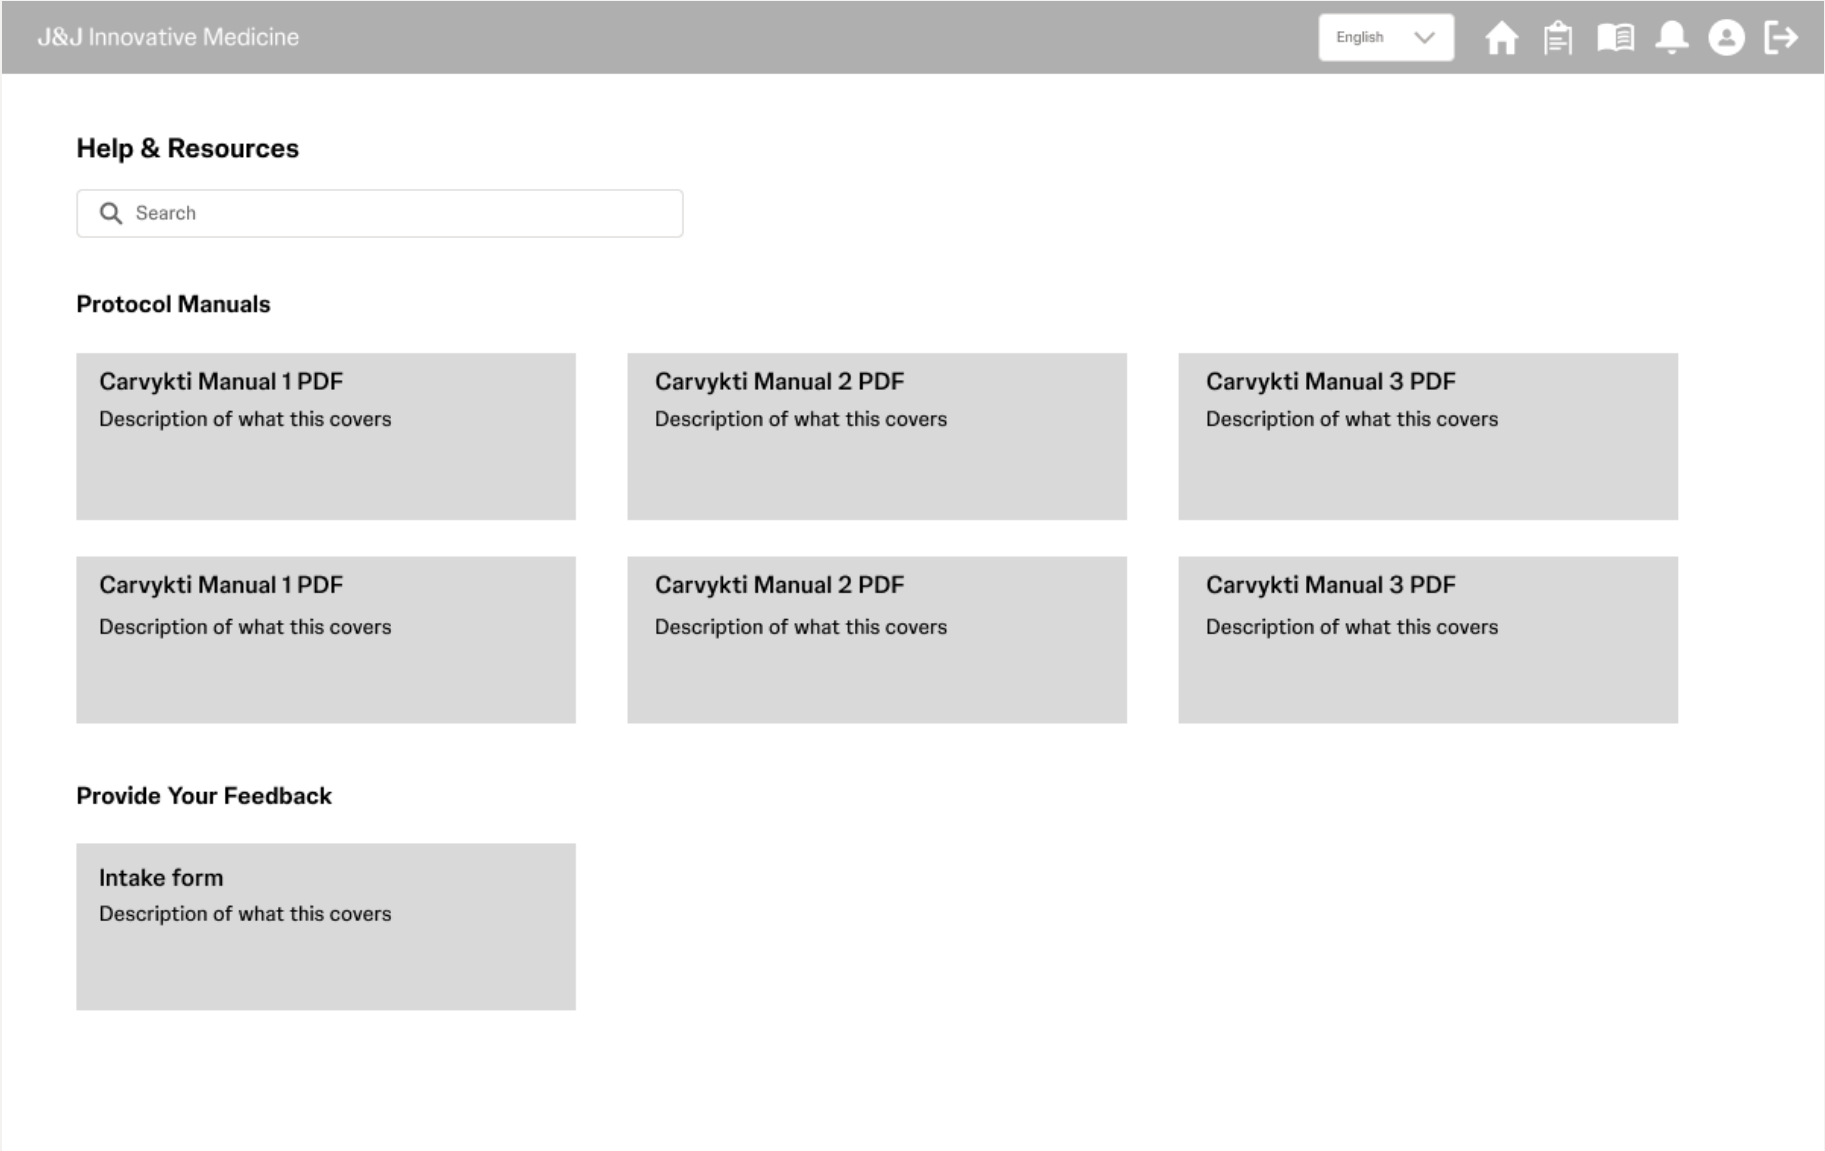

Opportunity

At the start of this initiative, the platform primarily serviced the United States and two EMEA countries. Over the following couple of years, we were going to expand globally to all regions. Prioritizing new users will be crucial to this fast scale.

Option 1

Searchable Manuals

Provide a list of manuals that are relevant to the user by country and role. Allow users to search for a specific manual and provide feedback.

How Might We

Quickly Communicate
a Required Action to
a User?

Opportunity

Notifications have been frequently requested. However, providing notifications outside of the platform require a thorough regulatory and compliance review. How might we communicate required actions to a user while staying in compliance and keeping in mind scalable practices?

Notifications Page

Create a notifications page that shows new notifications. If an action is required, provide a quick navigation to the designated action.

J&J Innovative Medicine

Notifications

• Release 5.0 Changes

This significant update introduces a range of enhancements and new features designed to elevate user experience and operational efficiency, including the following:

- **Revamped User Interface:** A modern, intuitive design that streamlines navigation and enhances overall usability.
- **Enhanced Search Results:** Optimized for rapid processing and superior reliability, even under high-demand scenarios.
- **Improved Integration Capabilities:** Facilitates seamless connectivity with existing systems, promoting more efficient operations.

• CLC.NR1111 signatures were completed

The modified order received new signatures. No action required at this time.

CLC.NR1111 was modified and requires new signatures

Review the order and ensure that it receives new signatures.

Review Order

CLC.NR9876 signatures were completed

The modified order received new signatures. No action required at this time.

Planned Cryo Date

6. User Testing

Approach

Hosted a series of group user testing sessions with internal users that interact daily with external users to receive feedback. These sessions included walking through the proposals with a series of pre-set questions with follow-up questions following the participants' responses to dive deeper.

Session 1

Landing Page

Home Page

- Users primarily search by Order ID.
Sometimes, Patient Name for hospitals, too.
- Question Mark icon for training resources is unclear.
- It would be nice to track shipments from home page.
- Confirmed information in side panel is helpful.
However, “Complete Next Page” button feels disconnected.

- Users liked the Order Overview being separate for the patient and product information.
- The checklist was seen as a big win for navigation.
- The autosave draft flag was a low priority.
- Reprint label without modifying was positively received.

Modification

- Users liked having the extra check for modifications to avoid accidental modifications.

The screenshot shows the 'J&J Innovative Medicine' web application interface. The top navigation bar includes the logo, a language dropdown set to 'English', and icons for home, notifications, and user profile. The main content area displays the 'Collection Data' for a specific order (US-UNIALA-10249613-01). A sidebar on the left contains a 'Checklist' with items like 'Collection', 'Collection Data', 'Collection Shipment', 'Cryopreservation', 'Receipt at Cryo', 'Cryopreservation Data', 'Shipment to Manufacturing', 'Cryo Release Memo', 'Manufacturing', and 'Delivery'. The main form area includes a 'Patient Verification' section with fields for First Name, Middle Name, Last Name, Date of Birth, Suffix, Collection Date, Treatment Site, Therapy/Product, and MRN. Below this is a 'Signature' section with two rows for 'Signature 1' and 'Signature 2'. A red circle with the number '1' highlights a modal dialog box titled 'Entering Modification'. The dialog contains the text: 'Before entering modification mode, please confirm that you would like to proceed. If there are signatures relating to any modified data, they will need to be resigned.' and buttons for 'Cancel Modification' and 'Continue Modification'.

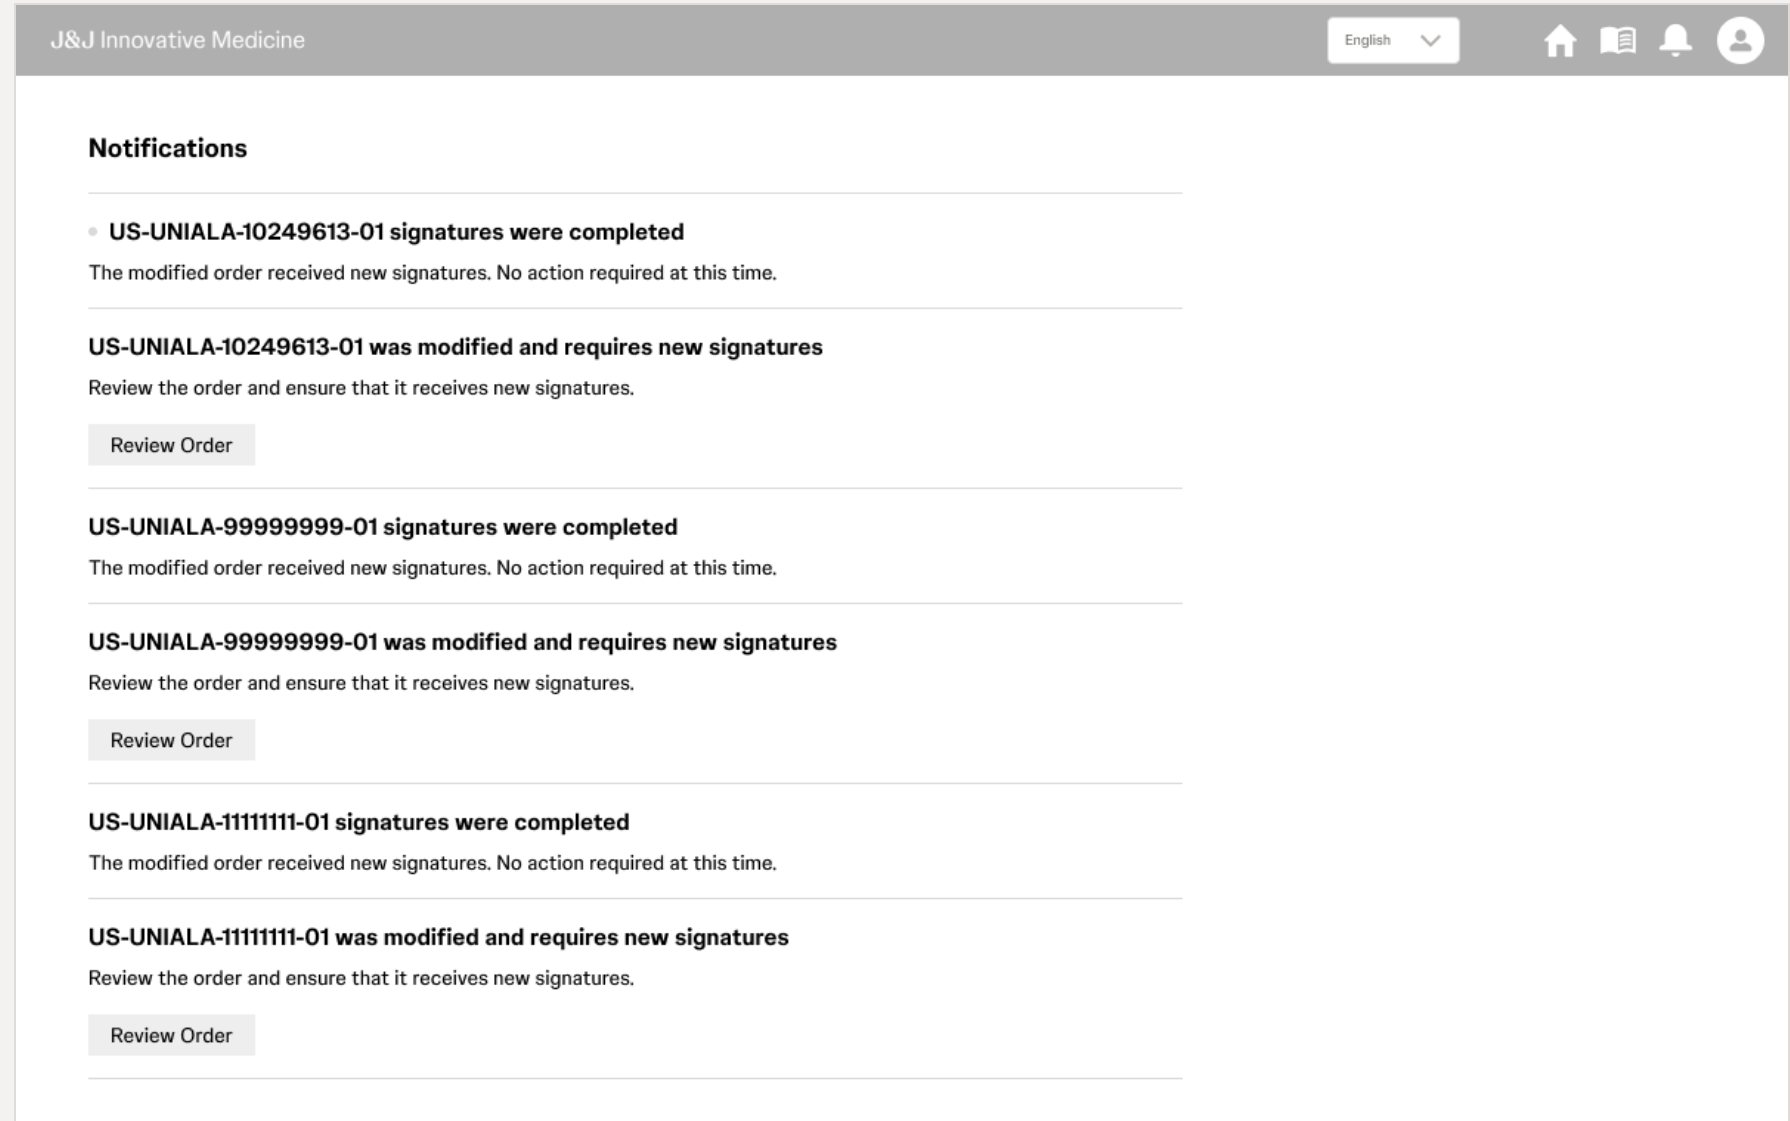

The screenshot shows the same 'J&J Innovative Medicine' web application interface as the previous one, but with a different modal dialog box. A red circle with the number '2' highlights a modal dialog box titled 'Reason for Modification'. The dialog contains the text: 'Before modifying, please confirm that you would like to proceed. The order will need new signatures if you choose to proceed.' and a note: '* Please enter a reason for modifying information. If multiple values have been updated, a reason must be provided for each update.' Below the text is a dropdown menu labeled 'Select..'. At the bottom of the dialog are buttons for 'Delete Changes', 'Continue Modifying', and 'Save Modification'.

- Users like the idea of having access to their trainings in the portal.
- The icon in the navigation bar for the page is unclear.

[illegible]

Notifications

- There is a high demand for the notifications page. Users liked the idea of being able to see what actions needed to be completed in one area.

7. Refinement

After some iterations with our users and development teams, we made some adjustments to the Order Stage section to better utilize the out-of-the-box components.

Shipment Tracking

Because the Shipment Tracking information varies by courier, we decided to create a new page to house the links that a user could review the shipment tracking content from.

This allows for further scalability as we onboard new couriers who track different data.

Resources Page

By leveraging out-of-the-box Salesforce feature Knowledge, the complexity of hosting materials was reduced. Adjustments were made to reduce maintenance of updating the resources.

Reports

The tab format that was proposed was not technically feasible. It created significant platform lag. Instead, we created a more visual way of accessing reports and creating custom reporting that could be configured to one's needs.

Notifications

Although in-app notifications would reduce regulatory checks, there is still complexing with triggering and saving notifications for each user. This is being further investigated.

8. Implementation

Implementation

Features considered MVP were released across two releases in Q1 and Q2 2025. This included the landing page changes, shipment tracking page, workflow changes, and modification mode. Resources and Reports page are scheduled for Q1 2026. Notifications is still in technical discovery.

Before each release, we prepared documentation of how all the components are structured in addition to the Salesforce Lightning Design System documentation.

↔ Spacing

	Top Navbar Width ↔ Fill 100% Height I Fixed 64px
	Content Holder Width ↔ Fixed 100% Height X Hug Do not set height Direction → Horizontal Align Children II Center Space between Padding ⊞ Opx 64px Gap][Space between
	Logo Width ↔ Hug Do not set width Height I Fixed 40px
	Action Bar Width >< Hug Do not set width Height I Fixed 36px Direction → Horizontal Align Children II Center Left Gap][Spacing/2 8px
	Language Selection (Combobox - Picklist) Width ↔ Fixed 110px Height I Fixed 32px Direction ↓ Vertical Align Children II Top Left Gap ≡ Spacing/1 4px

	Logout Icon Width ↔ Fixed 24px Height I Fixed 24px

9. Results

Measured Success with UX-Lite Survey

Objective

Survey all users of the COI/C portal to better inform feature prioritization using the industry-standard assessment UX-Lite, designed to measure the user experience of a system.

	Strongly disagree	Disagree	Neither agree nor disagree	Agree	Strongly agree
The product does what I need it to do.	☐	☐	☐	☐	☐
The product is easy to use.	☐	☐	☐	☐	☐

Approach

All respondents took a 5-minute survey online. All participants have previously used COI/C, with their experience ranging from being recently onboarded to several years of experience. This survey was sent out to all sites including hospitals, cryopreservation centers, contracted manufacturing organizations, distribution centers and our internal J&J facilities.

Conclusion

Project Reset resulted in a 7% increase in perceived usefulness and 1% increase in perceived ease-of-use from 2024. This shows the success of the initiative at solving the navigation issues that users experienced while improving day-to-day task completion.
